

MEMORANDUM

TO: File # 47-7254

FROM: Sandy Hemenway

SUBJECT: Addition Information on the System

DATE: 7/16/2009

During a phone conversation today with Russell A. Biggs (208) 280-2162, I obtained the following information on the distribution system, etc:

The pump is a 3Hp (no tag), 10' lift, 40 psi, 6" discharge to 6" buried line to fill the pond, where water was diverted into 6" gated pipe running north to south on the east side of the field (gravity flow east to west), and then discharging into a concrete ditch running east to west on the south end of the field (gravity flow south to north). The waste water ditch where it was dammed up at the POD sometimes was 12' deep.

No shares are owned from Twin Falls Canal Co, or Salmon River Canal Co LTD.

No Supplemental water.

Other water rights used: 47-8186 (groundwater application held up in litigation)

No Other uses.

Concrete weir (measuring device) was installed on the south concrete ditch. Russell poured the concrete himself.

Russell stated that he has not owned this property for 10 years now.
