

MEMORANDUM

TO: Keith Franklin, Northern Region

FROM: Pam Skaggs, State Office

SUBJECT: Correction of Permit 85-15686

DATE: May 13, 2009

=====

Permit 85-15686 was approved with a volume limit clearly associated only with the storage uses and pond capacity. Stock water and irrigation uses will have an additional volume identified related to actual development when a field exam for licensing is completed. The license would be limited to the maximum diversion volume identified on the permit if not corrected.

An order correcting the permit and an amended permit should be issued by region staff to correct this clerical error by eliminating maximum diversion volume and allow full development under the permit as intended by the application.
