FROM: Morgan Case
RE: Application for Permit No. 86-11987

*Entered in Comments
re Busch WR App
86-11987 4/22/09
D*

The IDWR Planning Section does not wish to raise any public interest concerns over Application No. 86-11987, which proposes the use of 4.9 AF of water from an unnamed tributary to Dry Creek.

The Idaho Water Resource Board holds minimum stream flow water right 86-11960 on the Potlatch River downstream of the applicant's point of diversion. This minimum stream flow allows for additional development in the amount of 10.7 cfs. If approved, the new appropriation should be counted against this 10.7 cfs. The Idaho Water Resource Board would like assurance that any appropriation junior to the minimum stream flow be recorded in the water right file for tracking purposes.
