

## MEMORANDUM

**Date:** April 27, 2009  
**To:** Transfer 74874  
**From:** ameritt  
**Re:** review and approval

---

This transfer was processed in parallel with state office staff. The application was not advertised since it has no hydrologic impact. The application was reviewed in the field since it appeared that the GCDB or imagery was out of line. Using GPS points taken at the center of the four road intersections at the corners of S20 and at the well in S29 found that the imagery appears correctly projected but points to the GCDB being off consistently approximately 50 to the east of where the physical lines of the tracts are located. A crossover WMIS point was created for the S29 well so that it shows up in the correct QQ. The imagery for the field was used to lay out the boundary for the POU shape but the tract description was forced to be in the tracts of the deed. The acres are as the rights are recorded although the prepared shape is slightly less and takes out roadways on the north and south ends of the property. The POU shape has 311.5 acres but the rights show 318 acres. The difference is attributed to the SRBA tolerance for tracts. Since the purpose of the transfer is to modify POD the acres were left as recorded. There are obviously overlaps in the numerous rights since the rate, volume and acre limits exceed the overall limits. It was not determined how these overlaps exist so the transfer is being approved as the rights were originally decreed. The transfer is being approved in the region as drafted. Watermaster has reviewed and approves.
