1.	067	The right holder shall measure and annually report diversions of water and/or other pertinent hydrologic and system information as required by Section 42-701, Idaho Code.
2.	T07	The right holder shall accomplish the change authorized by this transfer within one (1) year of the date of this approval.
3.	081	Use of water under this approval shall comply with applicable water quality standards of the Division of Environmental Quality of the Idaho Department of Health and Welfare. Rights 36-02726B and 36-15256B when combined shall not exceed a total diversion rate of 0.27 cfs. Commercial use is for a dairy. The water used for commercial purposes under this approval is applied to and irrigates land to satisfy water quality requirements. Water shall not irrigate growing plants unless the water is first beneficially used in the dairy as authorized by these water rights. Right 36-15256B is an expansion of Right 36-02726B pursuant to Section 42-1426, Idaho Code. The quantity of water decreed for Rights 36-11075B and 36-11076B is not a determination of historical beneficial use and each right shall not exceed 13,000 gallons per day. Two points of diversion are located within NESE, S03, T09S, R16E.

Transfer Mitigation Plan & Analysis Prepared for Van Beek Dairy

Portions of Water Rights (36-2726B, 36-15256B & 36-2645B)

Prepared by: Jason C. Helms, P.E.
February 25, 2008

TRANSFER INTENT

The intent of this transfer application is to change the place of use for several existing ground water stock and commercial rights to provide additional water for expansion of an existing dairy (+78 afa) and provide water for a new dairy (+30 afa). The attached layout (**Appendix A**) shows the location of the existing and proposed place of use in relation to the current ESPA model grid.

MODEL APPROACH

Evaluation of potential Snake River reach impacts resulting from the proposed transfer was calculated utilizing the most recent V3.1 ESPA Model Transfer Spreadsheet. Transfer portions were determined through proportional water right split analysis which is attached as **Appendix B**.

The historical impacts of the portions of water rights proposed for transfer was modeled based on diverting the water rights at their current place of use beginning on the priority date of the modeled water rights and continuing through the end of the model time period. This provides a baseline for evaluation of changes in impacts on modeled reach gains resulting from the proposed transfers. Model data entry is attached as **Appendix C**.

The impacts resulting from approval of the proposed transfers was evaluated by modeling diversion of the indicated transfer volumes at the proposed new points of diversion within the same model spreadsheet.

ANALYSIS RESULTS

According to the results of the ESPA Transfer Spreadsheet model analysis (Net Change: **Appendix D**, Reaches above Milner: **Appendix E**, Reaches below Milner: **Appendix F**), total additional Snake River reach impacts calculated due to the proposed transfer are highest in the Buhl to Thousand Springs reach with short term transient impacts of 7% over historical levels and total magnitude of the increase calculated at approximately 2.6 acre-ft per year. The Thousand Springs reach also shows increased impacts over historical levels of approximately 6% corresponding to a total magnitude of approximately 1.3 acre-ft per year. All other modeled reaches indicate changes of less than 5% of historical depletions.

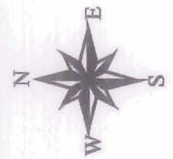

According to current IDWR guidelines, additional reach depletions must be within 5% of historical depletions or less than 2 acre-ft per year, therefore the associated transfer applications should be approvable without any requirement for a reduction in pumping volumes.
