Entering Dates

Enter the starting year and season for your simulation of the analysis period. (Spring is Mar, Apr, May and Summer is Jul, Aug, Sep and Oct. Winter is Nov, Dec). Once you have entered the starting date, push the "UPDATE DATES" button. The date only needs to be updated once, unless the simulation is modified. Modifying the date does not automatically adjust the simulation.

Entering Well Locations

Enter the row and column location for the 'TO' well in the spreadsheet. Enter the row and column location for the 'FROM1' well. Enter the row and column location for the 'FROM2' well. Enter the row and column location for the 'FROM3' well. If the 'FROM2' well is not to be modeled, the entered value should be 0. If the 'FROM3' well is not to be modeled, the entered value should be 0. The 'FROM3' well cannot be used if the 'FROM2' well is not modeled.

Running the Model

Once the model cells have been specified for the 'FROM' wells, push the 'RUN MODEL' button to generate the response function. The model needs to be re-run if the locations of the 'FROM' wells are changed.

Getting the Model Output

Once the model has been run, push the 'GET OUTPUT' button to retrieve the model output. This prepares the model output for use in the 'EFFECTS' worksheet.

Entering water use data

All water use should be entered in units of acre-feet per year. For instructions on multiple water rights with different priorities, see the Users Manual.

Entering 'TO' Well Projected Water Use

Enter the projected water use for the 'TO' Well in Column B. The water use should start in the trimester (4-month period) in which the water right is established.

Entering 'FROM' Well 'With Transfer' Use

Enter the 'With Transfer' water use for the first 'FROM' well in Column C, and for the second 'FROM' well in Column D, and for the third 'FROM' well in Column E. 'With Transfer' water use should reflect historical and expected future water use. It should cease or be reduced at the time of the water right transfer.

Entering 'FROM' Well 'Without Transfer' Use

The 'Without Transfer' Use for the 'FROM' wells should reflect the projected water use should the water right not be transferred. Enter the 'Without Transfer' water use for the first 'FROM' well in Column F, and for the second 'FROM' well in Column G, and for the third 'FROM' well in Column H. Prior to the expected date of transfer, the 'With Transfer' water use should be entered.

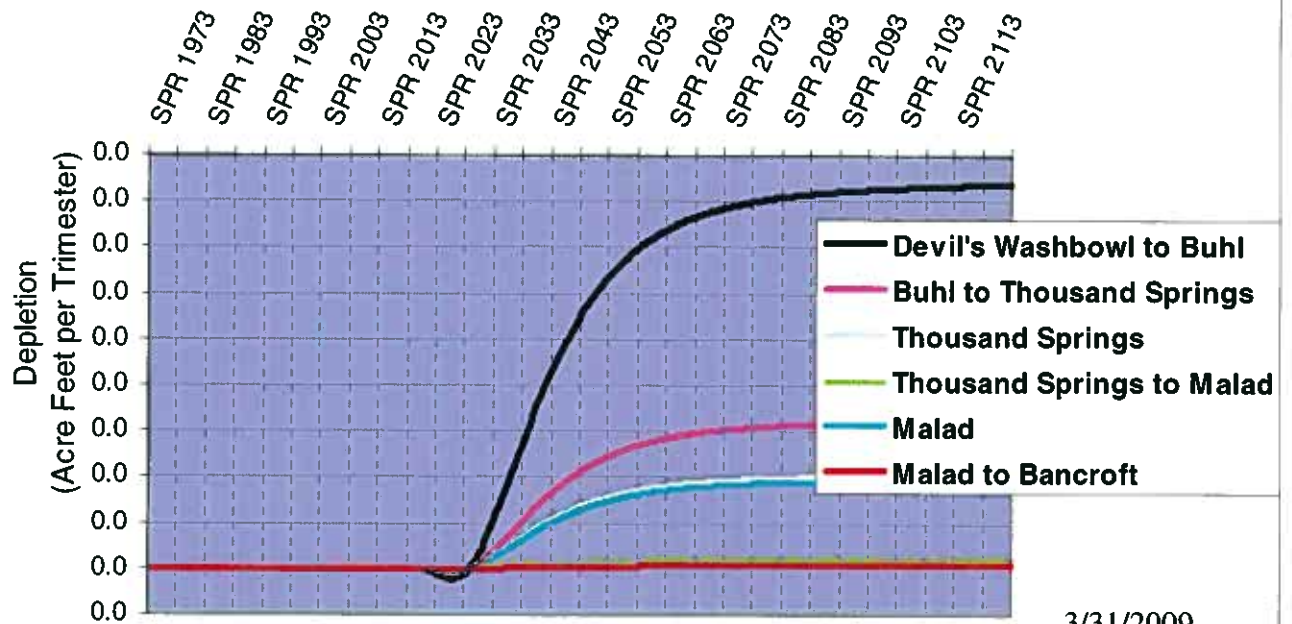

If only one 'FROM' well is to be represented, pumpage should be entered in the 'Without Transfer' column. If only two 'FROM' wells are being represented, pumpage should be entered in the 'Without Transfer' column for the second 'FROM' well. Projected water use in the 'TO' well and the 'FROM' wells will be used to calculate the net effect to the river reaches caused by the water right transfer.

Calculating Effect of the Transfer on River Gains and Losses

After all of the above steps have been completed, the 'EFFECTS' worksheet will be calculated. Push the 'CALCULATE EFFECTS' button. This will result in a graph showing the water use rates entered in the 'TO' well and the 'FROM' wells over the 11 reaches of the model runs) times the water use rates entered in the 'EFFECTS' worksheet. Here one graph is provided showing the net effects on all 11 reaches. Results are shown in the 'EFFECTS' worksheet. See the Users Manual for more information.
