Harriet,

I've attached a draft license incorporating your suggestions, with a few minor modifications. I think there are still a couple of loose ends to tie up.

Can you send me the location where the bypass flow will be measured. I need to add it to condition no. 7.

Condition no. 8 refers to a continuous measuring device. Do you mean a measuring device with a continuous data recorder? What kind of data recorder is being installed? What format should the right holder use to report the bypass data? Daily averages, monthly averages, electronic computer files? IDWR would prefer not to have to collect and store the annual records. However, if you think that it's necessary, a format that is simple to file, scan, and retrieve would be nice.

Is the bypass flow also being implemented for the irrigation right, 11-290? If not, can the right holder use the water diverted for irrigation under 11-290 to generate power even if the bypass flow is not being maintained?
