Subject: RE: Modifying the Measuring Device and Lockable Device Requirement

Sandy,

I'm sorry I missed your call this morning...I've been working in a no-service area today and didn't get your message until late tonight. In answer to your question about the measuring and lockable devices, yes I approve of waiving the requirement of them with that order being added to the license. When talking with Mr. Warren, as he explained their diversion works, it became apparent that the lockable and measuring devices would be an unnecessary hassle at this point. The pump itself could be shut off and/or removed if circumstances required, and the Warrens understand this. As I understand it, by adding the order you mentioned, should there be a change (i.e. new owners, new watermaster, new laws...what-have-you) the Department could require the installation of measuring and lockable devices at a later date. That way should the lack of these devices ever become an issue, either with the Warrens, the Department, or in the case of a water dispute or drought, the Department and Watermaster could regulate the diversion. I think this is the best solution for all.

I'm going to be gone in the early morning, but I'll give you a call when I get back and see if there's anything else I can do.

Take care,

Brandi Horton

Brandi,
Do you approve waiving both the requirement of requiring the Warrens to install and maintain a Measuring Device and Lockable Device? If so, we would be adding the following to the Order: "When notified by the Department, the right holder shall install and maintain a measuring device and lockable controlling works of a type approved by the Department in a manner that will provide the watermaster suitable control of the diversion(s)."

Thank you again for your help and time.
