Re: Young D-21, K-14 & K-132 Stockwater Transfers

Dear Allen

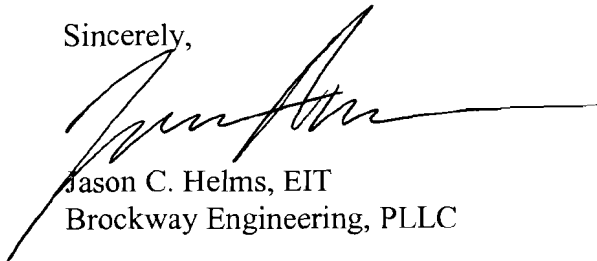

Please find enclosed 3 transfers which seeks to change the nature of use for portions of water right 36-8776 from irrigation to stock & commercial uses.

Based on the attached FSA record, the land was planted with alfalfa in 1984, 1985 and I have outlined an area within that field of appropriate size for the transfers as shown in each Part 3. In order to provide the water for the proposed dairies, the total irrigated area within the existing PPU will be reduced by the number of acres indicated in each transfer.

No ESPA mitigation was evaluated since the location of the proposed point of diversion for the new nature of use is currently authorized for diversion under irrigation use. At each site, it is proposed to utilize an existing irrigation well for the stockwater with allowance for the construction of an additional back-up well to ensure a continuous water supply for the animals.

I have also included a check for \$830.⁰⁰ to cover the expected processing fees ($2 \times 290.⁰⁰ + 250.⁰⁰). If you have any questions regarding these transfers, or need any additional information please don't hesitate to contact me.$

Sincerely,

Jason C. Helms, EIT
