Subject: RE: Application for Permit 23-11387

Ernie,

I spoke with Brian Patton about this application. We concluded that the new POD (Permit 23-11387) would be acceptable within the recreational designation for this reach of Palisades Creek based on the following conditions: 1) No alteration of the channel below the high water mark (e.g. diversion dam). 2) The pump must be outside of the high water mark. 3) The only part of the diversion to be below the high water mark is a flexible pipe.

Thanks,

Nick

Subject: Application for Permit 23-11387

Nick.

Eastern has been processing Application for Permit 23-11387 that requests a new POD on Palisades Creek. In the South Fork Snake River Basin Water Plan this stream is designated a "natural" waterway. Per Application Processing Memos 64 and 65 we are directed to consult with a member of the Water Planning Bureau staff about applications on protected stream reaches. Normally this would happen during the protest period but in this case the application has already been advertised with protest. Are there alternatives for approval of the application without impacting the "natural" designation? The application and associated documents have been scanned and can be viewed on the internet.

Thanks
