Re: Quantity for Stockwater

During transfer review process it was discovered the quantities for the individual uses on water right 31-7154A were less than the combined total and for 31-7154B quantities for the individual uses exceeded the combined total. Comparing documents in the adjudication file describing the split for 31-7154 into "A" and "B" revealed an error in the quantity calculations. After discussing this issue with regional staff, we decided to modify the quantity for stockwater increasing 31-7154A from .04 cfs to .05 cfs and decreasing 31-7154B from .07 cfs to .06 cfs. This left the quantities for irrigation unchanged and made the sum of the individual uses equal to the combined total for each right.
