Describe the reason for the proposed changes

This application combines two adjacent farms under a single irrigation system, changing the acreage distribution slightly to reflect current irrigation practices. The south well is having sand problems, so is being kept as a backup well if the new well does not provide enough water for proper irrigation. The north well may have enough water to do all the ground, but if not we will need to drill the new well right away so it can be used next season.

4. FOR CHANGES IN NATURE OF USE ONLY

A. Describe the expected quantity of the return flows and location of discharge after the proposed change

B. Describe the effects on other water uses resulting from the proposed change

This is an aerial photograph of a water treatment facility. The image is divided into four quadrants by a blue crosshair. A red line outlines a specific area in the upper right and middle sections. Within this red-outlined area, there is a large circular tank with concentric rings, a smaller rectangular structure, and another circular tank. Labels are placed near these features. The bottom left quadrant shows a large, dark, circular tank. The top left quadrant is mostly dark and textured, possibly representing vegetation or a different type of terrain. Two white circular marks are visible at the top edge of the image.
