The new well at Heyburn should be credited to the ID1050013 PWS number.

Suzanne,

We are in the process of transferring the water rights from domestic to municipal for Heyburn State Park. IDWR has a question about the PWS numbers for Heyburn. As the email below points out there are three numbers for the system. Can you please give us some clarification on the numbers? Thank you

Subject: Heyburn State Park Water Right Transfer

Megan,

In order to have a municipal water right, the right or rights must be regulated by DEQ and designated by a PWS (Public Water Supply) number. Heyburn State Park currently has three PWS numbers,

ID1050012 (BENEWAH)

ID1050013 (CHATCOLET)

ID1050014 (ROCK POINT).

I assume these PWS #'s are for the three existing wells. Would you verify that with DEQ? If that is the case, is Rock Point another name for what is called the secondary well? If DEQ is regulating each well, then the new well

Keith,
Here is the information from DEQ.

Chatcolet is the water system serviced by the main well, the secondary well and the proposed well. So the proposed well will have the same PWS as Chatcolet.

Rocky Point was incorporated into the Chatcolet system. Rocky Point never had a well of their own. The Chatcolet wells (main and secondary) serviced the Rocky Point System. However, the Rocky Point system had a reservoir so that is why they were given their own number. However, according to DEQ Rocky Point has been incorporated in the Chatcolet system. I have attached a map and on the map I have labeled the Rocky Point System.

Benewah is the water system serviced by the Benewah well, on the east side of the water rights map. It is not part of the Chatcolet system but the Parks and Recreation department wanted it included in the water rights transfer.

If there are still questions and I can not answer them then Suzanne said she is available for either of us. So just let me know.

Sincerely,

Megan M. Rounds, P.E.

ID1050012 represents the Heyburn State Park Benewah water system
ID1050014 represents the Heyburn State Park Rocky Point System which is currently listed in DEQ's records as non public (i.e. serving less than 25 persons year round)
