

MEMORANDUM

Date: November 20, 2008
To: Water Right File 45-14138
From: cpadilla
Re: Permit Review

The original application for permit was received in March and two amended applications followed. The first two applications requested a rate of 0.02 cfs while the third and final amended application requested 0.05 cfs, therefore the priority date has been adjusted to 9/29/2008, when the last application was received.

This application is for a network of troughs and a reservoir under one combined system so one application/permit for all the sources is acceptable.

This application is approvable in the moratorium area because it falls within the 42-111 domestic exemption. The place of use for this application for permit is within the trust area and has been conditioned accordingly.

I recommend this application for approval as suggested by IDWR Southern Region.
