Subject: RE: City of Driggs Water supply system

Michele, this is what we know about the city of Driggs' water sources:

- 1) Spring source can run any where from 100 gpm to as much as 1500 gpm pending ground water availability an year.
- 2) Well (old tank site) 300gpm
- 3) Dally well 100 gpm used as back up.
- 4) Lion well 350 gpm
- 5) High school well 400 gpm
- 6) Huntsman well (*new well not on line yet*) estimate 500 gpm
- 7) Valley Centre well 400 gpm
- 8) Teton Creek well (*new well not started up yet waiting final walk through with developer*) Flow?

Jared is the name of the City drinking water system operator if you need additional information at 208-390-1709. Also Sunrise Engineering (307-885-8500) is in the process of the updating the City FPS and might have additional information on the City total capacity needs. Hope that helps.

Subject: City of Driggs Water supply system

Mr. Eager,

I work for the Idaho Department of Water Resources. I have been asked to review two water appropriations for the City of Driggs with the goal of bringing them up to license status. Unfortunately, they have been knocked around for a quite awhile and because there isn't much information in the project files I am contacting you in hopes that DEQ can provide some.

Do you have any records of the system capacity or of well capacities for the City of Driggs? If you are not the person I should be petitioning for this information, I would be grateful if you would forward this email request.

Thank you.
