Chesnel, Jean-Pierre and Connie - Permit and Transfer Applications

Pond area	Average depth	Pond Volume	Fill Rate	Fill Rate	Fill Rate
(acres)	(ft)	(cubic-feet)	(ft ³ s ⁻¹)	(ft ³ d ⁻¹)	(days to fill)
0.82	4	142876.8	0.5	43200	3.3

At 0.5 cfs diversion rate (diversion to aesthetics), the pond turnover time = 3.3 days. A diversion rate of 0.5 cfs was applied for so that a maximum pond residence time of 4 days could be met for the pond. Due to the ponds relatively shallow depth, a 3.3 day turn-over time will help maintain adequate dissolved oxygen (DO) concentrations. If a lower diversion rate existed, originated water would not be able to offset decomposition of detritus material and respiration of the existing periphyton and macrophyte aquatic plant communities, thus creating an unfavorable, low DO concentration environment in the pond. A 3.3 day turn-over time will also aid in prohibiting water temperatures from becoming elevated before re-entering Indian Creek.
