Sharla –

Looks like our maximum use would be 25, 2500 gallon loads a year or 62500 gallons. It would all be consumptive use for dust abatement, filling herbicide tanks and vehicle washing. A higher diversion rate is also desirable for fire protection. We require contractors to come up with their own water source for large projects which they usually get temporary water rights from surface waters.

Thanks for the help and let me know what we need to do.

Eric, I spoke to Shelley Keen about your application. His suggestion was to first do the following:

I need either a letter or e-mail from you telling us the MAXIMUM ANNUAL VOLUME and how much of it would be consumptive. I explained that the amount of water taken out yearly would depend on the jobs being completed by ITD. I explained to him that there would be years that you would not be taking a lot of water.

Let me know, you can just e-mail.

Sharla
