RE: App For Transfer 73742, Hagerman Wings Farm

Dear Erick;

I have discussed your corrected application with our staff at the weekly transfer meeting. We agree that the proposed changes will not solve the problem of having sufficient irrigation water during the summer months. We cannot approve any application to increase Shaw's pumping rate from the Snake River unless water under his Billingsley Creek rights actually reaches the River. Since he told me that water from 36-15467 does not reach his property during the summer months, there would not be any water under that right entering the River. So it appears that his other water right will need to be added to the application in order for him to pump more than 270 gpm from the Snake River. He will need to install measuring devices at the point of injection and the point of re-diversion, and use of the system will be under control of the Water District 36-A watermaster. Right 2-10247 has more information on the conditions that could be applied to this transfer.

On a related note, I noticed that the point of re-diversion was described incorrectly. It is in the NW/NE/SE, not in the SW/NE/SE where the point of injection is. I double-checked it in ArcMap to verify the correct qqq, and have entered the correct data in Workflow based on your discussion with Mr. Shaw that the new application map is correct.

Regards,

James E. Stanton
Sr. Water Resource Agent
