Attachments: Supplemental Report - Walker Sand & Gravel.pdf

Aaron,

Attached is a supplemental report for the Walker Sand & Gravel water rights. As you will see, calculation of the annual volume is complicated by the many different water uses on the site and the lack of meters, but I believe the numbers I came up with are reasonable. I also attempted to estimate an appropriate volume for each of the earlier permits based on estimated usage as of the date of each Proof filing.

It may be best if we have a telephone discussion about this once you have had a chance to review it.

Thanks,
Chuck

Chuck,

A two week extension will be OK. Thanks for your prompt attention to this matter. As you may know, the SRBA court is very anxious to have all permits claimed in the SRBA licensed prior to issuing a partial decree, such is the case with 37-8136. I'll look forward to the additional information by August 1.

Thanks,
Aaron

Aaron,

I am waiting for some additional information on one of the facilities on the plant site, and then I have to do some data analysis. Is it possible to request an extension of the 30 days to allow an additional two weeks to provide the requested information?

Thanks,
Chuck

Chuck,

I received the licensing amendment one day after I mailed the reminder letter for 37-20833. I have sent the license on for signature by the Director.

The information provided in your email will aid in licensing the three rights associated with the sand and gravel operation. I will look forward to your report from your supplemental site visit. As you may already know, even if a water use is non-consumptive, an annual volume limitation is still required for the license. Only municipal and fire protection uses are exempt from a volume limit.

Thanks in advance for the additional information.
Aaron

Aaron:

Jim Walker sent the licensing amendment and \$50 fee last week for 37-20833.

With regard to the recommended volume on 37-20834 and the others, I did not mean to suggest 24/7, 365 days per year usage, because that is not how they operate the plant. I initially didn't feel that an annual volume was necessary since 37-20834 is non-consumptive. However, in reviewing this again I think a volume is warranted since the earlier rights are not non-consumptive. The problem is defining the volume accurately. They operate the gravel washing operation (one crusher) and other aspects of the plant from March 15 at the earliest to November 30 at the latest. They generally run continuously 10 hours per day, 5 days per week. Truck filling involves typically 3 trucks per day, 4000 gal per truck. Truck washing involves typically 3 trucks per week. There are a few other water-using aspects of the overall plant including a small asphalt plant, shop usage, and truck washing.

I am going fishing for a few days but on my way back I plan to make a "supplemental" site visit and look more carefully into each component of the operation, after which I will attempt to make an annual volume estimate.

The location and maximum surface area of the infiltration ponds can be ascertained from an aerial photo – I will get that as well.

Thanks,
Chuck
