From: Jana Jones

Re: Application for temporary approval

Application in the name of Dahle Construction, proposes diverting 0.44 CFS/200 GPM for dust abatement for road construction beginning August 12th thru November 1. The proposed point of diversion is located in 12N 18E SEC 3 SWNE on Bayhorse Creek. The place of use is located in 12N 18E across Sections 2, 3, and 12 along HWY 75 for approximately 3.5 miles. Nick Miller (water master 170) has given his approval for the application and the State of Idaho Dept. of Parks has given access permission for the project. The Fish and Game Salmon Office was contacted and they have no objections but have requested that a fish screen with 3/32 openings be installed on the suction hose of the pump truck.
