Dear Sirs:

In reaserching our water rights I found that during the SRBA process, when my father-in-law Henry Brandau, was still alive, two water rights with different priority dates and different points of diversion were combined into one water right:

Water Right #	Priority Date	Point of diversion	CFS amt	Place of use	Acre
57-2052	03-03-1913	SWNW, 11 1S 3W & NWNE, 11 1S 3W	.12 CFS	SWSE, 2 1S 3W	6
57-2094J	02-15-1916	NWSE, 15, 1S 3W	.08 CFS	SENE. 11 1S 3W	4

were combined in the SRBA process into:

57-10847	02-15-1916		.20 CFS		10
----------	------------	--	---------	--	----

~~Add A~~
We would like to ~~change the~~ point of diversion for water right #57-10847 ~~to the~~ ^{to the} SWSE, Section 2, 1S 3W. We have to take the water for that last field on our property through almost one mile of dirt ditch to get it to the place of use.

By changing our point of diversion closer to the place of use we can make more efficient use of the water. Changing the point of diversion to the SESE, Sec 2 1S 3W should not interfere with any other water rights on Reynolds Creek as our intended point of diversion would be well below all existing points of diversion. Additionally as this is a fairly junior right compared to the majority of the irrigation rights on Reynolds Creek, District 57-R, we would not be able to "make a call" for delivery after the watermaster is called to duty.

Connie Brandau
