Response

Water Appropriation Rules 40.05c through 40.05.g

- c. n.a. Water utilized by this application involves only water wasted from Arrowhead Water Districts tank overflow. The only rights involved are 75-19G and 75-21 and water is available only when the tanks overflow.
- d. n.a Water for the project depends on the wastewater available through inefficiencies in the existing system and does not impact the diversion rate of 75-19G or 75-21. It is estimated that up to .04 cfs will be occasionally available. No other licences, approvals or permits are required.
- e. n.a. All conveyance from point of waste to point of use is on the owners land. Arrowhead Water District wastes the water when their tanks overflow.
- f. This project will cost less than \$500 to install.
- g. The point of diversion and place of use is on private land owned by the applicant. The project only impact is on Arrowhead Water District and they have approved of this project. Comments have been requested from the Idaho Department of Environmental Quality, and the Idaho Fish and Game Department.
