July 5th 2007

Dear Sirs:

Last week my water system stopped working. Today I went to the creek to check and see what the problem was. The creek was bone dry. Sense we moved here in 1959 I have never seen the creek dry, Often it runs very low in late August or the first part of September but never dry.

I started working my way up stream to find the problem. When I reached the commercial elk ranch at Rockford Bay Road and Highway 95 it appears from the road that the creek has been dammed to water the elk. I can see ponding water in the creek.

Could you check in to this for me. Time is important as my lawn is brown, and my shrubs and trees are threatened.

If the elk ranch is the source of the problem, I would be willing to work with them to solve it.

Thank you in advance.

Rocky Watson
