From: medl
Re: permit review

I copied the POU and POD shapes from the Application layer to the Permit layer. The POU shape is actually 3.4 acres which is slightly larger than the irrigated acreage sought and larger than the recorded parcel size of the applicants property. I copied the shape without updating the acreage. The true irrigation acreage will be established by the field exam.

The And/or connector did not appear on the Permit even though it had been corrected for the application. I added it again for the Permit.

In a place of use overlap comparison, I found that there may be some un-appropriated water from right 79-4432. I believe that the Lindseys can file a late claim on that water so I consulted with Craig Saxton from adjudication. He agreed that there may be some water still available from Parson ranch but that the new property owners had been given ample opportunity to file claims.

On 6/20/08 the applicant called the office-day line asking for the status of his permit. I returned Mr. Lindseys call. I asked him about the unclaimed water and for a clarification in the amount of time he would like to have to complete the works. He thought that Kelley Chamberlain, as the majority property owner of the former Parsons ranch, had submitted claims for all of the water associated with the ranch. At this time, he was more interested in permitting this application. We discussed the length of time he would need to complete the works. He stated that much of his river frontage is flooded and that he would not be able to complete the works in one month as he had submitted on the amended form. He knows that he needs more time than that and mentioned possible construction of a stilling well and fences but didnt know how much time he would need to accomplish all that he had in mind. I chose to provide Mr. Lindsey his originally requested 5-year development period.
