Subject: RE: Spring Canyon Ranch well#2 37-22250

Hi Michele,

That is fine with us, as long as water rights 37-22250 and 37-22251 equal the original permit 37-8659 exam for total flow diversion rate and irrigated acres. The division between the two rights looks fine.

Thanks,
Erick

Erick

I heard from Spring Canyon Ranch earlier today. I have made some progress with the water right split and I would like to get some feedback from you and your client. I have corrected the location of well #2 in our database and I have separated some pieces of the irrigation shape Amy sent me and associated them with well #2. I have attached a screen shot of the 37-22250 (well #2) acreage outline.

I will associate the rest of the irrigation shapes with well # 3, and proportionally distribute the total permissible place of use to each of the new splits. Please, let me know if your client has a problem with any of this.

Thanks
Michele
