Re: license review

While reviewing this file for licensing, I found the following worth noting:

Neither the POD nor the POU shapes had been created prior to my review. I created them based on the field exam notes, 1992 aerial photography and Boise County taxlot information.

Only one POD, a well (permit ID 737314) drilled in Oct 1996 serves this water right. An older well serves the house, yard and shop. The two wells are not on an interconnected system. At the time that the well for this water right was drilled, it yielded approximately 65 gpm or 0.14 cfs. No flow measurements were required and none were made during the field exam. The field examiners theoretical calculations show that the system capacity is greater than the permitted amount. Therefore, the permitted rate is the limiting rate for this water right.

The domestic use is for internal use in two mobile homes.

The stockwater places of use were found in SWSW of sec 23 and NWNW of sec 26. An amendment will be needed.

I corrected the irrigation season of use to the standard for this area.

↘ The permit limits the use to one home, and there is no other portion of the permit that can be changed to cover the second home. The license will cover only one home.
