5. c) The volume of flow of Cardinal Creek was determined at the point of diversion by measuring the time required to fill a container of known capacity. This volume was determined to be approximately 0.22 cfs.

Calculations using the Hazen-Williams formula indicate the system will deliver 0.130 cfs at the irrigation site and 0.108 cfs at the site of domestic use. The total head is approximately 76 feet at both points and the length of the line is approximately 1,250 and 1,750 feet, respectively. Two inch diameter PVC pipe has been installed. Service to the area to be irrigated is by means of 2 inch and 1 inch diameter pipe. Service into the house is by means of 1, 3/4, 1/2 and 3/8 inch plumbing.

Field tests consisting of measuring the time required to fill a container of known capacity very closely checked the calculated capacity of the system. These tests indicate a delivery of 0.140 cfs at the irrigation site.

The field measurements and calculations were made by Don Ferguson, a registered professional engineer in Idaho.

Dear Mr. Ferguson:

One of the conditions of approval of your water Permit No. 94-7096 (see last page of your approved permit) was that evidence of the extent of development be submitted as proof of application of water to beneficial use to this office on or before July 1, 1978. Enclosed is an affidavit form which must be used to submit the required proof of beneficial use.

If you have not fully completed your project, and you have not previously received an extension of time, you may request an extension of time provided the delay is for reasonable cause as indicated in Section 42-204, Idaho Code, amended. If you have been prevented from proceeding by a governmental agency or by litigation, more than one extension of time can be granted.

Either the beneficial use affidavit or a request for an extension of time must be received by this Department on or before the above mentioned date, otherwise the permit will lapse and be of no further force or effect.

Mr. J. Pat Ferguson
P.O. Box 1063
Wallace, ID 83873

Dear Mr. Ferguson:

We have taken the liberty of re-typing your Application for Permit and we are returning it to you for additional information.

The amount of water you listed for "culinary" purposes under Item #4 appeared to be in excess. The maximum amount of water we can normally allow for domestic purposes for one family is 0.04 cubic feet per second (which is equivalent to approximately 18 gallons per minute), unless it can be shown that a greater amount of water is needed. Domestic purposes also includes up to $\frac{1}{2}$ acre of irrigation. If you propose to irrigate more than $\frac{1}{2}$ acre, the number of acres and their location by 40-acre tract should be listed under Item 8b of the application. The maximum amount of water we can allow for irrigation purposes is 0.02 c.f.s. per acre. The total amount of water you wish to appropriate should be listed under Item 5.

After completing the above items, please sign the application at the bottom of Page 3 and return it to our office. A filing fee must accompany the application when it is submitted. The correct fee can be determined from the enclosed Fee Schedule.

Your assistance in this matter is appreciated, and if there are any questions, please do not hesitate to contact us.

Very truly yours,

ROBERT G. HAYNES, P.E.
Regional Supervisor
