From: Shelley Keen
Re: Issuance of License

Review of the field report and data entry for preparation of the license were completed by Shelley Keen and Jim Zokan on 10/14/2003.

DIVERSION RATE -- Field examiners measurement was not useful. However, given the diameter of the pipeline from the creek, it is likely that the right holders are capable of diverting at or near 0.04 cfs during high flow periods. Therefore, the license will be issued for 0.04 cfs, which is standard for domestic uses.

2. Measurements:

Flow measurements of Cherry Creek were taken at the Point of Diversion (POD) using the Orange Peel Method. The creek at this point had a rounded bottom and measured three and one-half feet (3½') wide and four inches (4") deep at the deepest point. The length of run for the orange peel was ten feet (10'). Three measurements were taken.

	3	<u>136</u>
Total		463

$$\text{Average} = \frac{463}{3} \approx 154 \text{ sec./10ft.}$$

E. NARRATIVE/REMARKS/COMMENTS

A screened two and one-half inch (2½") poly line extending upstream into Cherry Creek (*Photo 1*) passively fills a buried one thousand (1000) gallon storage tank (*Photos 2*). The water level in the tank is therefore subject to the water level in Cherry Creek. The storage tank is about twenty-five feet (25') from Cherry Creek.

A submersible pump in the storage tank supplies the house. The house is across a driveway and about fifty feet (50') from the storage tank.

The permit lists a spring as being a source of water. Cherry Creek is the only source of water and the spring should be excluded as a source on this permit.
