MEMORANDUM

TO: File 92-07218

FROM: Sharla

DATE: March 10, 1998

RE: Telecon

On this date I spoke with Bryce Coulter (Log Flow Coordinator) concerning possible overlap with earlier License 92-07043. Bryce told me that the portable submersible pump used for dust abatement under the previous license is used upstream from the permanent pump used under 92-07218, in fact the two pumps are on separate power systems. The earlier license is used to fill water trucks for dust abatement.

E. NARRATIVE/REMARKS/COMMENTS

System Consist of 25 H.P. Landmark intake pump that pumps water to a bentonite lined pond. A float sensor is located in the pond to controll when water is needed. From the pond a 25 H.P. pump intakes water from a 18" pipe and pumps it to a 5' diameter Culvert to where a 125 H.P. Marathon Motor and Cornell 6" pump distributes water through a 10" main line. The 5' diameter Culvert also has a 15" drain pipe that runs back to the pond. There are 6" inch laterals off the main line that have "T" fittings that utilize 3" flexible pipe to serve irrigation towers. The towers have big gun sprinkler heads that dispense water over log decks. The area that the log decks cover is 7 acres. Within the area that is irrigated, drainage ditches run parallel the 6" laterals to recapture water. The recaptured water drains back to the holding pond. There is also a overflow pond to capture water from pond #1 if it takes in to much water.

Pond #1 is 35' x 130' and is shaped like a TRIANGLE.

overflow Pond #2 is shaped round and is 30' x 40'.
