

MEMORANDUM

Date: June 04, 2008
To: Water Right File 95-9490
From: medl
Re: permit review

This permit was formerly numbered 96-9253. Although it was protested, the protest was withdrawn without necessitating a hearing. Mr. Spackman reviewed the settlement agreement and drafted an order which defined some of the conditions.

Basin delineation changes in north Idaho required that this application be renumbered from basin 96 to basin 95.

I created the large POU shape file from the application map and Kootenai County taxlot information. This development abuts Bonner county on the north. The taxlot projections are overlapping the county line projections so the place-of-use erroneously shows Bonner county for the NW1/4NE1/4.

The POD for the existing well was GPS located by Northern region.

There was no documentation in the file showing that this development/developer qualify as a municipal provider. However the applicant intends to connect 24 homes to a common system and that quantity would qualify as a public water supply system regulated by DEQ certification. I added a permit condition which requires documents supporting municipal use be supplied when proof is due.
