Subject: RE: City of Pierce Water Appropriation Right

DEQ will not support disconnecting from Canal Creek; having two source water intakes allows the City an alternative if either is compromised. We agreed with and supported the City in placing the Orofino Creek intake for this reason. We have never discussed removing the Canal Creek intake.

Subject: City of Pierce Water Appropriation Right

Keith,

Reference my voicemail to you earlier today.

Ray Hennekey called me this morning and explained that he has been out of the office.

Ray explained that it would be OK to transfer the water appropriation right from Canal Creek to Orofino Creek with the understanding that diversion is no more than the current right allows.

I think this will resolve the issues.

We can either list the Canal Creek intake as being for emergency use only or it could be disconnected.

Ray indicated that you could contact him to discuss this issue if you would like to.

Do you need more information from the City of Pierce or us?

If so, please let me know what you need.

Thanks, Mike
