Mike:

I checked with Jim Richards regarding whether there had been any gauging in measuring the flow of Orofino Creek on a long term basis, and he said that there was not. It is a much larger stream than the creek we have been using and we have water shortages with it (canal creek) only in the driest times of the year. I guess you will have to use your computer model for your stream flow figures.

Jim did get the other information you requested regarding usage. I will fax you the deed information you need tomorrow with a map. That should satisfy the other part of your request. Here's the usage report, 2007:

Total for the year:	85.677 million gallons
Peak Month: (July)	9.971 million gallons
Peak Day: (July 25th)	.426 million gallons
Min Month: (April)	6.168 million gallons
Min Day: (June 17th)	.144 million gallons
