

STATE OF IDAHO
DEPARTMENT OF WATER RESOURCES
NOTICE OF CHANGE IN WATER RIGHT OWNERSHIP

RECEIVED

JUN 29 2006

WATER RESOURCES
WESTERN REGION

Please print or type. Attach pages with additional information. Instructions are included at the end of this form.
 Incomplete forms will be returned.

1. Please list the water right number(s) and/or adjudication claim number(s) (if any) for each water right to be changed. List just the adjudication claim number if there is no corresponding water right record on file with the department. Indicate, by checking in the space provided (under the "split" heading), if the change in ownership is limited to a portion of a water right in which case division of the existing water right or adjudication claim record will be required.

Water Right No(s).	Adjudication Claim No(s).	Split	Water Right No(s).	Adjudication Claim No(s).	Split
PP 65-10477	65-23289 65-23290	Y			
AD56 5-6625	AD 3-19-01				
PP 65-2431X					

2. The following **REQUIRED** information must be submitted with this form:

- A. The appropriate **FILING FEE**. See instructions for fee amounts.
- B. A copy of the most recent **DEED, TITLE POLICY, CONTRACT OF SALE** or other legal document indicating your ownership of the property and water right(s) or claim(s) in question, **WITH ATTACHED LEGAL DESCRIPTION**.
- C. Either of the following (if necessary to clarify division of water rights or other complex property descriptions):
PLAT OF PROPERTY or **SURVEY MAP** clearly showing the location of the point(s) of diversion and place of use of your water right(s) and/or adjudication claim(s) (these are usually attached to your deed or on file with the county).

OR

If your water right(s) and/or adjudication claim(s) is for ten or more acres of irrigation, you must submit a USDA Farm Service Agency **AERIAL PHOTO** with the irrigated acres outlined and point(s) of diversion clearly marked. The **AERIAL PHOTO** should be submitted in place of the **PLAT OF PROPERTY** or **SURVEY MAP**.

3. Name and Address of Former Owner/Claimant(s)

ARKOOSH

4. New Owner/Claimant(s)

EXHIBIT A

A parcel of land located in the Southwest quarter of the Northwest quarter of Section 26, Township 9 North, Range 8 East, Boise Meridian, Boise County, Idaho, more particularly described as follows:

Beginning at a stone which is located North 0 degrees 2' West 157 feet from the Southwest corner of the Northwest quarter of said Section 26 and which stone is a closing corner numbered 5 for Homestead Entry Survey No. 178;

Thence North 59 degrees 24' East 662.34 feet to a point, which is the real place of beginning;

Thence South 23 degrees 40' East 210.25 feet to a point;

Thence North 59 degrees 24' East, 208.71 feet to a point;

Thence North 23 degrees 40' West 210.25 feet to a point from which the corner numbered 5 of said Homestead Entry Survey Numbered 178, bears North 59 degrees 24' East 208.71 feet;

Thence South 59 degrees 24' West 208.71 feet to the real place of beginning.

EXCEPT:

A parcel of land being on the Southeasterly side of the centerline of State Highway No. 21, Project No. F.H.P.-25-4(4) Highway Survey as shown on the plans thereof now on file in the office of the Department of Highways of the State of Idaho and being a portion of the Homestead Entry Survey No. 178 of Section 26 and Section 27, Township 9 North; Range 8 East, Boise Meridian, described as follows, to-wit:

Commencing at the Southeast corner of the Northeast quarter of Section 27, Township 9 North, Range 8 East, Boise Meridian;

Thence North 0 degrees 02' West along the East line of said Section 27, a distance of 157.08 feet to Corner No. 5 of Homestead Entry Survey No. 178 of Section 26, Township 9 North, Range 8 East Boise Meridian;

Thence North 59 degrees 24' East along the Northwesterly line of said Homestead Entry Survey No. 178, a distance of 662.34 feet to the real point of beginning;

Thence continuing North 59 degrees 24' East along said Northwest line 208.71 feet to Grantors most Northerly property corner;

Thence South 23 degrees 40' East along Grantors Northeasterly property line 30.20 feet to a point in a line parallel with and 70.0 feet Southeasterly from the centerline and bears South 25 degrees 12' East from Station 433+35.70 of said State Highway No. 21, Project No. F.H.P.-25-4(4) Highway Survey;

Thence 64 degrees 48' West along said parallel line 207.30 feet to a point in Grantors Southwesterly property line;

Thence North 23 degrees 40' West along said Southwesterly property line 10.5 feet to the real point of beginning.

Comments:

1. CORR3 3/7/1997 COPIED FROM REMARKS

Comment: SOURCES FOR THIS RIGHT ARE FENCE CREEK & SPRING. * THE CABINS ARE OWNED BY: FRED CAREY - RP 09N08E264191 A, EVERETT CAREY - RP 09N08E264192 A, TED HAWKINS (EDGAR T. FAMILY TRUST) - RP 09N08E264193 A, ROBERT BAKER - RP 09N08E264190 A. THE ASSOC. IS FENCE CREEK WATER ASSOCIATION.

2. SBOOK 2/4/1998 HOMES

Comment: ORIGINAL DECREE WAS FOR FIVE HOMES WITH A 6.0 AF VOLUME. FOUR HOMES ARE USING THE RIGHT. I HAVE CUT THE VOLUME TO 5.0 AF. SUE BOCK

3. MMINICUC 5/26/1998 P OH/SOURCE

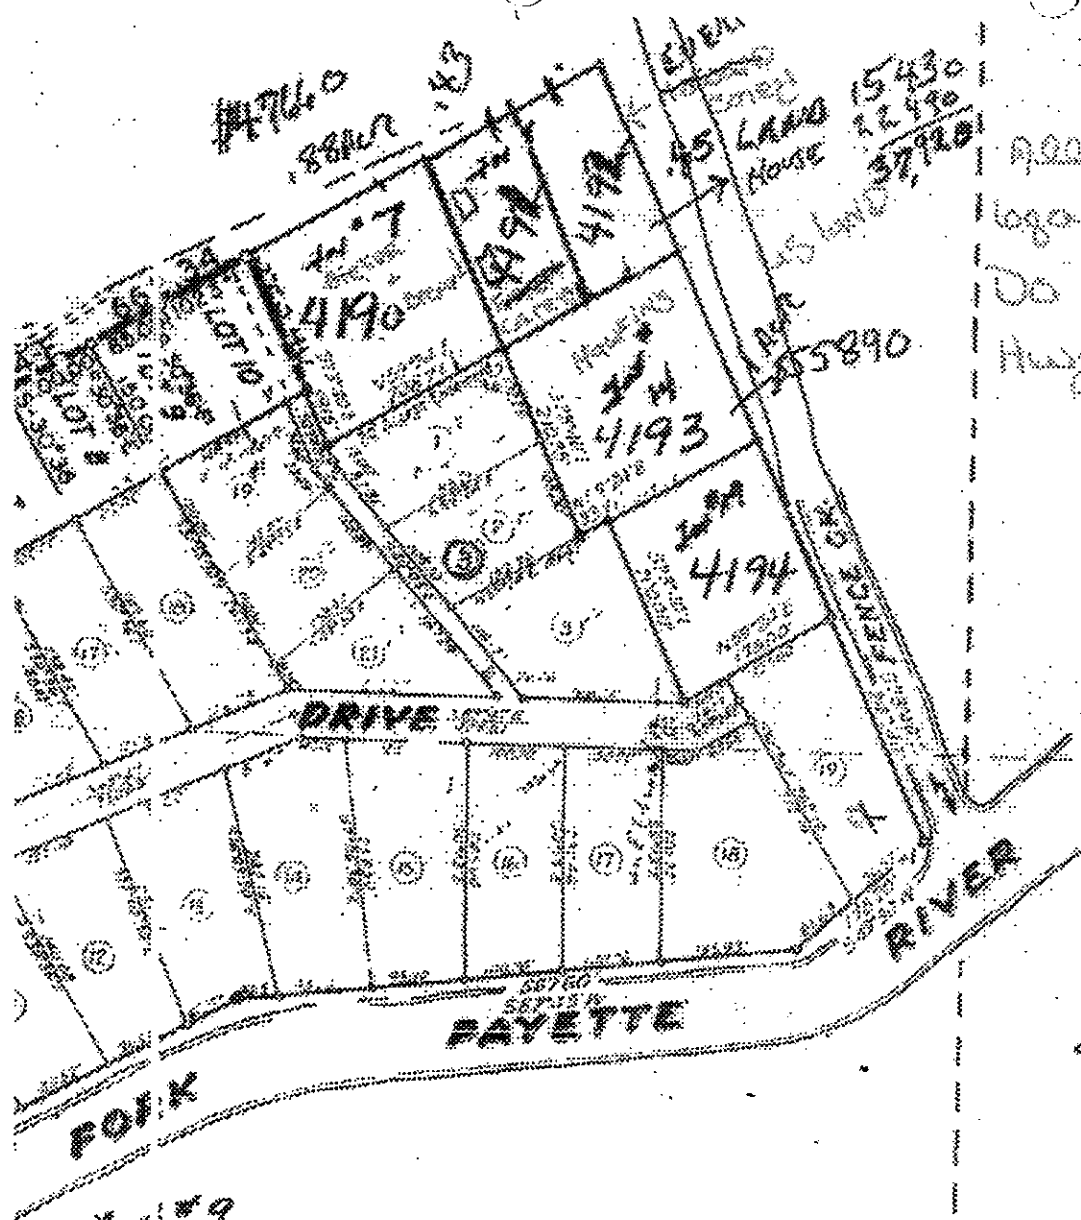

Comment: DURING A FIELD EXAM CONDUCTED FOR PERMIT 65-07504, THE DIVERSION SYSTEM FOR (A)65-10477 WAS REVIEWED. A DIVERSION WAS FOUND ON FENCE CREEK. DELIVERY IS TO 4 CABINS: CAREY (2 CABINS), HAWKINS AND BAKER/WELLS (NOW ASKEW?). THE LINE HAS APPARENTLY ALSO BEEN EXTENDED TO THE UPPER COUGLIN LOT, PREVIOUSLY OWNED JOINTLY BY HAWKINS AND JENKINS. THE FIELD EXAM WAS CONDUCTED 06/12/1998. A PREVIOUS FIELD EXAM, CONDUCTED 08/20/1990, FOUND 4 CABINS. THE UPPER COUGLIN LOT IS COVERED BY (A)65-02431A OR X, BUT ALTHOUGH THIS RIGHT IS ALSO DIVERTED FROM FENCE CREEK, THERE IS A SEPERATE DIVERSION AND DELIVERY SYSTEM. CONSEQUENTLY, THE UPPER COUGLIN LOT CAN BE IRRIGATED ONLY VIA (A)65-02431 (A/X TRANSFER NEVER COMPLETED). THE UPPER COUGLIN LOT IS NOT IN JOE LEWIS SUBD BUT DOES NOT APPEAR TO BE A PART OF THE HISTORICAL USE OF (A)65-10477. PHOTO OF UPPER COUGLIN LOT IN PERMIT FILE 65-07504. ADDITIONALLY, NO SPRING SOURCE WAS FOUND 06/12/1998 OR IS INDICATED IN NOTES FROM 08/20/1990 EXAM. HOWEVER, NO EFFORT TO FIND THE SPRING WAS MADE DURING THE 1998 EXAM. PLEASE SEE FILE 65-07504 FOR INFO REGARDING THE SYSTEM FOR JOE LEWIS SUBDIVISION. MM 08/26/1998.

Communicating Highway

Mr. Frank E. Hume, P.E.
Division Engineer
Federal Highway Administration
Mobile Division
Bulow, ID 83707

Dear Mr. Hume:

In our visit of my dealings we have been informed by Mr. Fred Carey that our plans do not reflect the true water line crossing situation at Station 415+00. We do not have all the plans but Sheet 12 indicates that this crossing (415+00) connects into a line from the 3' x 4' concrete reservoir which is owned by Don Lewis. This source of water is incorrect.

There is a concrete "water right" which covers four ownership right of Stations 415+00 to 415+05. Connections to be shown are shown on the plans set 1, 2, Campbell (local), Fred Carey and the Forest and Wildlife Division. The lines serving these owners is a 3 inch pipe which starts from an underground tank that shows on plans about 100 feet left of Station 415+00. From which it crosses the present highway to a point about 20 feet right of Station 415+05; valves in this general area will be water service to the four owners.

We believe that additional field work should be made to establish the exact location of the tank and the various valves in the water system. Corrections to Sheet 12 may then be in order. The important consideration at this time is to keep this water system separate from the Lewis system so as not to adjust the existing facilities to the satisfaction of the four owners.

Please have a field check made and furnish us with detailed plans to support water line adjustments in our visit of my contacts with these owners.

Mr. Ernest A. Mutch
Boise, Idaho

Dear Sir:

The purpose of this letter is to make plain our agreement as to the water right for the property which has been deeded to you, as particularly described in that Deed recorded in the Office of the County Recorder, Boise County, State of Idaho, recorded in Book 53 at page 592 of Deeds.

It is and has been our specific agreement that you are entitled to a water right from Fence Creek for domestic use and the right to run a three inch pipe line from Fence Creek to the property described in the above Deed, reserving the right to the undersigned, her heirs or assigns to tap said pipe line and use water therefrom for other property which she may own located between Fence Creek and your property.

Dated this 31 day of May, 1952.

Harriet B. Hanson

August 14, 2001

FENCE CREEK WATER RIGHTS -- Recently decreed by the Snake River Basin Adjudication Court

NUMBER	NAME	PRIORITY	CFS	COMMENT
65-2431A	Conway	1939	0.04	Irrigate 2 acres. Lot 18-V Bl. 1
65-2431X	Balance of J. Lewis Subdivision	1939	0.51	Irrigate 23 acres & minor domestic use in balance of subdivision
65-6625	Arkoosh, Becker & Brown	1945	0.04	Domestic 1 cabin next to subdivision
65-10477	Fence Creek Water Users Assn.	1950	0.16	Domestic 4 cabins next to subdivision. <i>Separate pipeline from all others.</i>
65-10559	Conway	1962	0.06	Irrigate 1 acre & domestic 1 cabin next to subdivision
65-7781	Enatic	1976	0.10	Fire protection, Lots 9-12 Bl. 1. <i>Source is longwell stream fed by Fence Creek.</i>

Notes:

All rights are diverted or delivered through the subdivision pipeline except 65-10477 for the association's separate pipeline. Association cabins include Carey (2 cabins), Harbins and Arkoosh et al. The latter is same cabin also served by 65-6625 from subdivision pipeline.

One cfs equals about 450 gpm or 50 miner's inches.

0.02 cfs equals about 9 gpm or 1 miner's inch.

To Whom It May Concern:

This is a response to the letter, dated August 14, 2001, from Steve Lester, Water Rights Supervisor, Idaho Department of Water Resources. The letter concerns "Fence Creek water rights" and is addressed to a number of persons, one of which is my father, Ben Britton.

Mr. Lester's letter states that a complaint received by the IDWR on June 27, 2001, alleges that insufficient water is available for some of the subdivision property owners due to excessive water use in part of the subdivision.

This letter is my testimony to the distribution of the water rights addressed in water right # 65-2431X and all dates and statements contained are made to the best of my knowledge.

The two infrared aerial photos below (joined near the east end of the subdivision) show the river as light blue, the roads, rock and bare ground as white, the riparian vegetation as pink and the conifers as dark red. The meadow is blue-gray.

The lines drawn on the aerial photo below are not based on a land-survey but are shown for the purpose of illustration. The heavy lines show the approximate paths of the two 2-inch flexible lines, tapped into the 8-inch supply from Fence Creek (water right # 65-2431X), that serve domestic and irrigation uses for the cabins surrounding the meadow. The lighter lines show the main stream and laterals of a stream network that served to irrigate the meadow. These streams are referenced as "contour ditches" in the "Proof of Completion of Works" for Permit No. 18663, for Clara Daye, dated February 29, 1944.

Historical Domestic and Irrigation Supply of Joe Lewis Subdivision

The 2-inch lines are not part of this testimony or dispute. Those lines were in place long before water right # 65-7781 was filed and remain in place. The meadow has never been developed but had been irrigated continuously, by a main stream and laterals which run its length and width. The general slope of the meadow to the south or southeast.

The attachment labeled "Exhibit A" is a drawing from the file for water right # 65-2431 showing the distribution system clearly labeled as "Irrigation Ditch & Waterline." The arrows pointing the direction of the ditch and the waterline would cross the properties of (then owners) Lewis, Folkerson, Hepper, Davis and Gorostiza (my father's property). That document is dated 2/10/71 -- predating the application for water right #65-7781. The main stream and the northern most waterline shown in this document are on my illustration, above.

Another document from the file for water right #65-2431 is the "Discharge measurement notes for Fence Creek Diversion for Joe Lewis below pipe." This document is dated 7/2/74. That is before the application for water right #65-7781. The Department of Reclamation (now Idaho Department of Water Resources) listed measurements "below the pipe." This pipe is the one that is tapped for the above-mentioned waterline and from which flows the ditch where these measurements were taken. It is not an unnamed creek as stated in the application for water right #65-7781.

Beginning in 1964, I watched Joe Lewis irrigate the meadow by damming the laterals to control the flow of the irrigation water. That method of irrigation was part of the original design of the distribution system, named "contour ditches" in previously mentioned documentation. I cannot attest when the main stream of these contour ditches was dammed, ending distribution to property for which rights exist. In any case, the water was diverted by Loren Wetzel, the former owner of the lots that now use water from water right 65-7781. That water right was filed on water that was already purposefully diverted and allocated under a water right, with a priority date of 1939, which is known as 65-2431X.

Mr. Lester's letter contains three alternatives for resolution of the problem. He states that the first alternative, Watermaster control, is neither suitable nor required for this situation. Mr. Lester's letter states, in the second alternative, that a lateral ditch association could regulate the distribution of the water system. If that association had existed, and was notified, when water right 65-7781 was applied for, these facts would have been presented. The permanent damming of the main irrigation supply for the meadow amounts to an unlawful stream alteration, taking water rights from others. Water right # 65-7781 covering the water diverted from some "unnamed stream" -- which formerly was only an irrigation lateral -- should never have been granted.

The third alternative is to regulate water right # 65-7781. The current holders of water right # 65-7781, which is a subordinate right, should not be able to control the amount of water that flows through the community distribution system for water right # 65-2431X. If right # 65-7781 is valid, it can claim whatever water is left after the 0.51 CFS is delivered to the Joe Lewis Subdivision. The valve shown in Mr. Lester's diagram, labeled "Frisbie valve with lock," should never be locked by a subordinate right-holder.

The valve is necessary to keep the pressure in the delivery system, so it should remain in place, unlocked, and be used to sustain the pressure necessary to deliver the righted water for #65-2431X.

Further, it could be argued that the contour ditches should be re-established in their former channels in order to return water to property owners who were denied their water rights by the damming of the main stream of the distribution system. This would leave Mr. Frisbie with the allocation mentioned in water right # 65-7781X but virtually no water to fulfill water right # 65-7781. Whether any action is taken with regard to the irrigation streams is warranted is beyond the scope of this letter. I request that the lock be removed from the valve so that water pressure in the waterlines can be maintained.

For the record, I am an employee of the Idaho Department of Water Resources. I work in a division of the Department that is separate from those groups who work with Water Rights and Adjudication. My access to the files or databases involved in assessing or granting water rights is exactly the same as citizens not employed by the Department. The attachments were copied from microfilm records of the water rights. I have researched this information and written this letter on own time.

Sincerely,

Ben R. (Rick) Britton

Re: Fence Creek Water Rights

Dear Water User:

A meeting was scheduled by the water users last Friday evening at the subdivision to discuss the Fence Creek water situation. About fourteen water users attended. I attended for the Idaho Department of Water Resources (IDWR) as a guest of the water users.

As they say in diplomatic circles, frank and meaningful discussion took place. This means some pretty blunt exchanges occurred, and some people (including me) probably got a little over excited. But that is okay - sometimes you have to voice these concerns to work them out. Good will was expressed among the group by the end of the meeting.

These types of meetings are usually messy and not necessarily conclusive. Not everything works out perfectly, which is no surprise. All in all, it was a good meeting to air lots of perspectives and more or less agree on the next step.

What can we conclude from the meeting? First, let me reiterate the decreed Fence Creek water rights are valid rights recently recognized by the Court in the Snake River Basin Adjudication regardless of any personal opinion about a water right. Also, water rights normally do not convey right-of-way or easement on private property. The activity of installing or maintaining distribution lines from the mainline remains a separate issue between property owners.

I understood the consensus of the group meeting included the following points:

- Fence Creek usually (always?) supplies enough water to satisfy all the water rights.
- Maintenance problems have existed and will continue to exist at the diversion point, along the mainline, and in lateral distribution lines for individual lots.
- Personal locks will be removed from valves along the community pipeline. People should agree not to adjust valves etc. belonging to others unless specifically authorized by the appropriate owner of an item in question. That is the "good neighbor" approach.
- A weir could be installed in the unnamed stream (aka "No Name Creek" or ditch) between the end of the subdivision pipeline and the Frisbie property. Water from the pipeline can be measured with the weir to see if the creek supplies enough water to satisfy all the water rights associated with the community distribution system.

September 17, 2001

Page 2

- If the weir indicates inadequate flow, someone can check the diversion point at the creek. Routine maintenance, including steps to divert more water into the pipeline, might relieve the problem.
- If adequate water is available in the pipeline as noted by the weir, water problems at a given lot suggest maintenance problems between the mainline and the individual lot. Property owners can work together to fix these problems.
- If water still does not reach a particular lot, people should discuss the best way to solve the problem instead of acting individually. This might include Frisbie agreeing to not divert junior water right no. 65-7781 (fire protection via the pipeline to the unnamed stream). No person other than Frisbie or someone authorized to act on Frisbie's behalf has a legal basis to shut off this Frisbie water right. In other words, nobody should act as a self-appointed director of the community pipeline system.

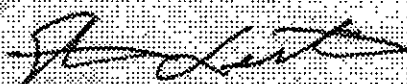

I think everyone realizes the Fence Creek water problems are best solved by the good neighbor approach. Of course, the water users can form a water delivery association of some sort and adopt bylaws and so forth. But my sense is that people prefer to handle things informally and make life at the subdivision more enjoyable for everyone.

Weir information was distributed to Mr. Talbot at the September 7 meeting. Enclosed is some information for a V-Notch Weir. This type of weir is easy to make and offers the best tool for smaller water measurements. A weir adequate to measure about seventh-tenths foot of head is recommended. You can probably use rebar to stake the weir on the downstream side. The weir should be placed in the unnamed stream/ditch far enough from the end of the pipeline to avoid measurement problems associated with water turbulence. Additional technical information about weir construction and installation might be available from the USDA office in Emmett. You can contact the USDA-NRCS (formerly Soil Conservation Service) in Emmett at 208-365-4212.

I hope this process has been helpful to sort out the problems and reach a practical solution. This situation is not suitable for formal and more rigid regulation, and I doubt you want that atmosphere in your subdivision. Your efforts in this regard are appreciated.

It is unlikely IDWR would make another site visit for this situation. I am confident from your interest and participation at the recent meeting that the water users can and will work out the problems. Please let me know if I can provide more information for the Fence Creek area.

Sincerely,

Steve Lester
Water Rights Supervisor

Re: Fence Creek Water Rights

Dear Water User:

The Idaho Department of Water Resources (IDWR) received a complaint on June 27, 2001 regarding the distribution of Fence Creek water in and near the Joe Lewis Subdivision east of Lowman. I visited the site and investigated the situation on July 11, 2001. This letter summarizes the results of the investigation and the related water rights in addition to suggesting some alternatives to help resolve the problem.

The complaint alleged that insufficient water is available for some of the subdivision property owners due to excessive water use in part of the subdivision. The enclosed diagram depicts the situation I encountered during the field visit. Two Fence Creek diversions were observed in my visit. Note that all of the water rights serving property within the subdivision plus one water right serving an adjacent cabin are diverted from Fence Creek via a common pipeline system. The other Fence Creek diversion involves a pipeline for the Fence Creek Water Users Association. The association system serves four cabins immediately east of the subdivision. The Snake River Basin Adjudication Court recently decreed the Fence Creek water rights. The enclosed table defines these rights.

Flooding destroyed some or all of the Fence Creek diversions (more than two diversions before the flood?) some years ago. Additional information obtained after the field visit suggests the rebuilt subdivision pipeline has adequately served the water users for many years. Recent modification of the subdivision pipeline system might be the source of water distribution problems within the subdivision. Inadequate maintenance at the point of diversion could compound the problem.

Issues related to design, maintenance or ownership of a shared water system generally are not within IDWR jurisdiction. Assuming proper design and maintenance of a diversion system, disputes about distribution of water from a common system might involve water right issues within IDWR jurisdiction. What alternatives exist if legitimate water right disputes occur? Possible solutions to water right disputes are discussed below.

ALTERNATIVES

Real scenarios often do not readily fit solutions suggested by Idaho law when it comes to water distribution problems. Idaho statutes suggest three alternatives for Fence Creek water rights. None may appeal to you. Of course the best solution comes from a consensus of the water users solving the problem short of a formal regulatory scheme.

One alternative involves the Payette River Watermaster. Fence Creek is tributary to the South Fork Payette River and remains subject to Watermaster regulation based on the availability of water to satisfy water rights according to the priority (seniority) system. The Watermaster can regulate diversions at the water source. The Fence Creek situation is not one of competing calls for water at the two points of diversion on the creek. Instead the problem involves distribution of water beyond the point of diversion in a common delivery system.

Watermaster control is neither suitable nor required for this situation. Even if Watermaster control were suitable, the likely result would be to shut off all diversions of water from the creek to satisfy senior downstream water rights in this difficult drought year.

The second alternative is the "lateral ditch association." Sections 42-1301 through 42-1309, *Idaho Code*, define a regulatory scheme for three or more water users sharing the same distribution system. The users elect a "ditch manager" to regulate the distribution of water from the common conveyance system. The association can implement controls necessary to properly distribute water rights through the shared system. The lateral association normally involves a ditch system. Perhaps this alternative can be applied to a pipeline system.

An option in the lateral ditch association alternative occurs under Section 42-1308, *Idaho Code*. This statute allows a water user to petition the IDWR Director to appoint a ditch manager if the water users have not activated an association through their own efforts and elected a manager. The Director can grant or deny the petition based on his findings. A manager appointed by the Director can only serve for the remainder of the year in which the appointment occurs. The water users would be expected to hold annual meetings after that to continue the regulatory system.

Due process requires considerable time to activate a lateral ditch association in either option of the second alternative. Based on the timing factors, it is probably not practical to use the lateral association alternative for a timely solution before the end of this irrigation season (October 15).

The third alternative considers regulation of water right no. 65-7781. This right allows 10 cubic feet per second (cfs) or about 45 gpm from an unnamed stream for fire protection at the Frisbie property in the subdivision. The unnamed stream receives water from the subdivision pipeline and delivers water to a small pond on Frisbie's land. Water right 65-7781 is the most junior right in this picture and should not be used if senior Fence Creek rights remain unfilled under this alternative.

Natural flow was not found in the unnamed stream during my visit nor is it likely most of the year. About .10 cfs was delivered from Fence Creek to Frisbie's pond on July 11. It appeared Frisbie could also receive water from the buried distribution network for the subdivision (valve for above ground sprinklers at east end of the Frisbie lots).

Frisbie is entitled to a prorated share of the senior irrigation right serving the subdivision (65-2431X). It could be argued that water from the pipeline to the unnamed stream and then to Frisbie's land is part of 65-2431X. Frisbie would remain within proper water right limits provided the prorated share of the senior irrigation right was honored, regardless of how Fence Creek water was delivered to the site. Water right 65-7781 would not be in use under those circumstances.

Fence Creek Water Rights
August 14, 2001
Page 3

Boise County Assessor records show the Frisbie land as 2.06 acres (Lots 9-12, Block 1). Frisbie's share of 65-2431X is about .04 cfs (18 gpm). Use in excess of this amount would fall under junior right 65-7781 but should only occur under the assumptions of the third alternative if remaining Fence Creek water rights delivered through the subdivision pipeline were fully satisfied.

The third alternative to resolving the distribution problem in the subdivision would be to regulate the use of water right 65-7781 to provide available water to senior water rights using the same pipeline system. The authority for such a step is based on Section 42-351, *Idaho Code*, which discusses use of water not in conformance with a valid water right. IDWR does not have sufficient information to invoke this step at this time. Questions of design, maintenance and ownership of the subdivision pipeline might mitigate against the third alternative.

SUMMARY

Water distribution problems at the Joe Lewis Subdivision might or might not reflect legitimate water right issues. If legitimate water right issues are involved, none of the above alternatives can quickly solve the water distribution problems. IDWR involvement in any solution most likely cannot resolve design, maintenance or ownership problems regarding the shared conveyance system. The best and quickest solution is one mutually agreed upon by the water users without including IDWR oversight or regulation.

Perhaps a more informal arrangement would be better than the alternatives presented here. I will be glad to discuss this by meeting with the property owners upon a request by three or more property owners. A request should include a suggested time and place to meet and information to verify that all the owners identified in the attached distribution list have been contacted about a meeting and are available to attend if interested. The IDWR office is available if you want to meet in Boise. Meeting in the Lowman area is acceptable if you prefer. I prefer normal business hours but could meet on a weekday evening if necessary.

Please contact me at 208-334-2190 if you need more information.

Sincerely,

Steve Lester
Water Rights Supervisor
