PART 1**6. General Information:**

a. Description of diversion system Diversion into a series of ponds, streams and water features for aesthetic uses, and subsequent redirection from ponds into a pressurized irrigation system serving residential lots and open common areas.

b. Are the lands from which you propose to transfer the water right subject to any liens, deeds of trust, mortgages, or contracts? Eagle Springs Ranch = Yes; Barnes Ventures = No. If yes, provide a notarized statement from the holder of the lien, deed of trust, mortgage or contract agreeing to the proposed changes. (Letter from BAR-K Mortgage Bankers previously provided.)

c. Describe the affect on the land now irrigated if the place of use is changed pursuant to this transfer:

Due to residential development, some land will become impervious and no longer irrigable. Ponds will also be constructed on currently irrigated land. Historic farming included highly consumptive crops. This application changes the irrigation place of use to meet residential lot and common area landscaping requirements. The application also changes the nature of use of a portion of the rights from irrigation to aesthetic uses to mitigate for an associated application for permit.

d. Remarks:

This application proposes to modify the irrigated place of use to accommodate irrigation of residential lots and common areas. Flows will be diverted into ponds, then redirected from ponds into a pressurized irrigation system for irrigation use. Barnes Ventures Inc currently owns, and will continue to own water rights 65-8850 and 65-11324, which are dedicated to uses in Section 35. Likewise, Eagle Springs Ranch LLC owns, and will continue to own water rights 65-5633 and 65-5696, which are dedicated for use in sections 27, 28, and 34. A 26-acre portion of Right 65-5633 is changed to aesthetic & diversion to storage (0.63 cfs), and aesthetic storage (13.0 af) to mitigate for 26-acres of ponds in Sections 27 and 34. A 13-acre portion of Rights 65-8850 and 65-11324 is changed to aesthetic & diversion to storage (0.26 cfs), and aesthetic storage (6.5 af) to mitigate for 13-acres of ponds in Section 35. Aesthetic storage volume is based on pond surface area and the annual precipitation deficit for shallow open water systems per the ET_{Idaho} Garden Valley RS Station (152 mm/yr, equivalent to 0.5 ft/yr. See www.kimberly.uidaho.edu/ETIdaho/). Permits 65-13559 and 65-13399 together authorize development of up to 3.2 cfs for irrigation of up to 210 acres describing land that overlaps a portion of the rights identified in this application; future transfer applications modifying these rights following licensing are anticipated. See corresponding permit application seeking aesthetic and recreation use for constructed ponds and water features. Points of diversion are changed and added to match those listed in the associated application for permit.

ACTION OF THE DIRECTOR, DEPARTMENT OF WATER RESOURCES

**APPLICATION FOR TRANSFER OF WATER RIGHT
PART 3**

- A. Draw a map or attach a USGS map indicating the new point(s) of diversion and/or the new place of use for the rights described in part 1. Clearly depict the land by section, township and range number.**

The grid is a 10x10 square grid. The central square, located at the intersection of the 5th column and 5th row, contains the text "SEE ATTACHED". The grid is composed of solid lines forming the outer boundary and dashed lines forming the internal grid.

Scale: 2 inches equal 1 mile. Draw plan in ink.

PART 3**B. CHANGES IN NATURE OF USE**

1.	New Nature of Use	Amount(cfs/af-ft)	Hours/days/year	Period of Use
	<u>Aesthetic, Diversion to Storage</u>	<u>0.89 cfs</u>	<u>214 days/year</u>	<u>4/1</u> to <u>11/1</u>
	<u>Aesthetic Storage</u>	<u>19.45 ac-ft</u>	<u>365 days/yr</u>	<u>1/1</u> to <u>12/31</u>

Quantity and quality of return flows and location of discharge: Aesthetic flows will circulate through a series of ponds and streams. Portions of aesthetic flows unconsumed by evaporation or seepage will discharge to a side-channel of the South Fork Payette River at 9N 4E 27 NESW, then ultimately return to the South Fork Payette River. Water quality is expected to remain relatively unchanged or improved compared to historical agricultural runoff. Seepage is expected to recharge the local aquifer and/or return to the South Fork Payette River.

2. Describe effects on other water uses resulting from the proposed change:

The nature of use changes presented in this application will provide mitigation for the associated permit application. Irrigated acres are reduced at a 1:1 ratio to new pond surface area, thereby balancing or potentially reducing annual evaporation. Therefore, no negative impacts to other water uses are anticipated.

I hereby assert that no one will be injured by such change and that the change does not constitute an enlargement in use of the original right. The information contained in this application is true to the best of my knowledge.

I understand that any willful misrepresentations made in this application may result in voiding its approval.
