

MEMORANDUM

Date: May 05, 2008
To: Water Right File 65-23114
From: medl
Re: permit review

4/23/08 I copied the Application layer POU and PODs that Vicky Music had created, into the Permit layer.

A POU comparison shows significant overlap of this permitted POU by other established water rights. I contacted Mr. Bob Grimm, who is the maintenance supervisor and the person responsible for seeing that this permit meets all requirements for approval. He is interested in clarifying the school's water rights and is willing to work with the previous property owners to complete any ownership verification.

I received a phone call from Mr Grimm today, 5/5/2008. I guided him through a query of our web page so that he could collect information on the school's existing water rights. He told me that the school has not been using the spring-sourced water right and has capped one of their existing wells because it delivered water with unacceptably high levels of fluoride.

At his request, I sent him an email containing a list of the water rights that the school already owned and a list of the water rights that appear to have been acquired with the purchase of the Tucker property.
