Water Right Application 74-7346

We are definitely interested in pursuing this water right, and are working on getting letters from Fish and Game and IDEQ, and will get them to you as soon as possible

Thank you

Kurt

Additional information on water right application no. 74-7346

O5 additional information requirements

- c. i. James Whittaker, Leadore Idaho, is the only other water user on this ditch. Approximately twelve years ago James transferred water to a location above us, and it is because of this transfer that we filed this waste water right. We currently have a waste water right #74-0912.
- ii. There is no application for ground water.
- iii. There will be no impact on other water rights, as this is a waste water right and will only be used when waste water is available.
- d. i. This water would be used to supplement water already on this land, and would only be used when waste water is available.
- ii. Since this is a waste water right, there is no steady source of water, but would only be used when water is available. This water source sometimes dries up completely, at other times there may be as much as 80 to 100 inches.
- e. i. This water right would use existing ditches, so there would be no new easements or rights-of-way.
- ii. There would be no new permits, licenses, or other approvals, since it would use already existing ditches.
- f. i. This right would use already existing pipe, pump, and sprinklers, so there would be no financial commitment needed to apply water as proposed.
- ii. There are no construction costs, since this water would be used in existing system.
- g. We are currently working on letters from the Fish & Game and DEQ.
