Subject: BSU Permit
Attachments: RE: 63-32421; Boise State University application for permit 63-32421

Christian,

This email is response to your telephone call on 12/31/2007 concerning the status of the BSU permit, 63-32421. I have attached the last two messages I had between your office and ours concerning the BSU permit. The permit is currently on hold until mitigation has been proposed, or processing of the Basin 63 water right applications resumes.

I will be leaving the region office on the afternoon of January 4, 2008. After January 4, there will no longer be a main contact until this application is re-assigned to a different water right agent. The re-assignment probably will not take place until a mitigation plan is received or Basin 63 water right processing resumes. As of today, I haven't been given any direction on resumption of processing in Basin 63. If processing of Basin 63 applications for permit does commence, I would estimate that it will take some time to work through those applications that were received before the BSU permit that have been on hold since the 1990's.

I hope this helps you.

Dan Nelson
Senior Agent
Idaho Department of Water Resources.
