Re: De Ruyter Dairy Transfer Application

Can you throw the old stuff out except for the signature page and replace with this? This makes some other changes based on better aerial photos and maps of the building project he is currently finishing.

You will notice there are almost 50 acres where the water was moved off in transfer 5007 in the expectation that the buildings would be located there. As you know, when water transfers were problematic we had to apply for them before closing the real estate transactions and often this was a year before construction actually began, so changes occurred. This transfer fixes those mistakes. It also dries up an additional 40 acres for new stockwater.

Another change was the adoption of a very low rate of process water usage. The dairy is using much less than originally anticipated, and we wish to change the nature of use of some of that to stockwater

As you sent my earlier proposal to the state office and they were kind enough to concur in my suggested end result (though not my rationale), I am just including that sheet as explanatory of the numbers I used.

Thank You. Please call if you need anything!

Darwin
