ATTN: Keith E. Franklin, Senior Water Resources Agent

RE: License No. 95-9122
W. Brant Morris

Dear Mr. Franklin:

I hereby request an amendment to the reference Water Right License as shown on the attached sheets. The reason for the changes is as follows:

1. All water diverted from the well is pumped at the same diversion rate (0.19 cfs = 85 gpm). All water is diverted into the pond which serves as both irrigation storage and recreation.
2. Water from the storage pond will be pumped to eight different five acre parcels (40 acres cumulative) on the northerly side of Gallop Lane. The acreages are reflected on the license.
3. The annual water to be diverted from the aquifer is anticipated to be continuous for six months of each year. Therefore, the annual volume to be diverted for irrigation and evaporation loss is 70.0 AF.

As you can see, I have listed all the categories as 70.0 AF because the same 70.0 AF applies to each. And, the total annual diversion will be 70.0 AF.

Additionally, I have checked the requirements of Condition #1. Using 40 acres, the maximum diversion rate is 1.20 cfs >> 0.19 cfs as shown on the license and the maximum annual diversion volume is 120 AF >> 70 AF as shown on the license. We meet all conditions of the license.

If you or your staff of the Department have any further questions or comments on this matter, feel free to contact our office at your earliest convenience. Thank you for your cooperation.

Very Truly Yours,
Inland Northwest Consultants

W. BRANT MORRIS
