Thank you Steve for meeting with me on March 18, 2008. We have reviewed each outstanding condition in the settlement agreement as it relates to Blaine County. And approve your recommendation as stated under each to satisfy items 1 and 2. Please contact me as soon as possible if these conditions can not be meet. I will be contacting you at the end of July regarding the dissolved oxygen testing and again in December regarding the outflow temperatures.

1....near the outflow...testing shall occur from April through December with a "hobotemp" or similar water temperature testing device. This testing shall be conducted during 2003 and again during 2005.

Testing has occurred from 9/13/2005 - 10/05/2005 (graph is attached). The pond was not installed until October of 2003. To satisfy this stipulation Steve Fischer will record outflow temperatures April-December of 2008. He will also record by the Comstock head gate and the outflow of Greystone.

2....test for dissolved oxygen and pH at or near the outflow of pond...testing shall occur during the month of July, with samples taken on two separate days. This testing shall be conducted during 2003 and again during 2005.

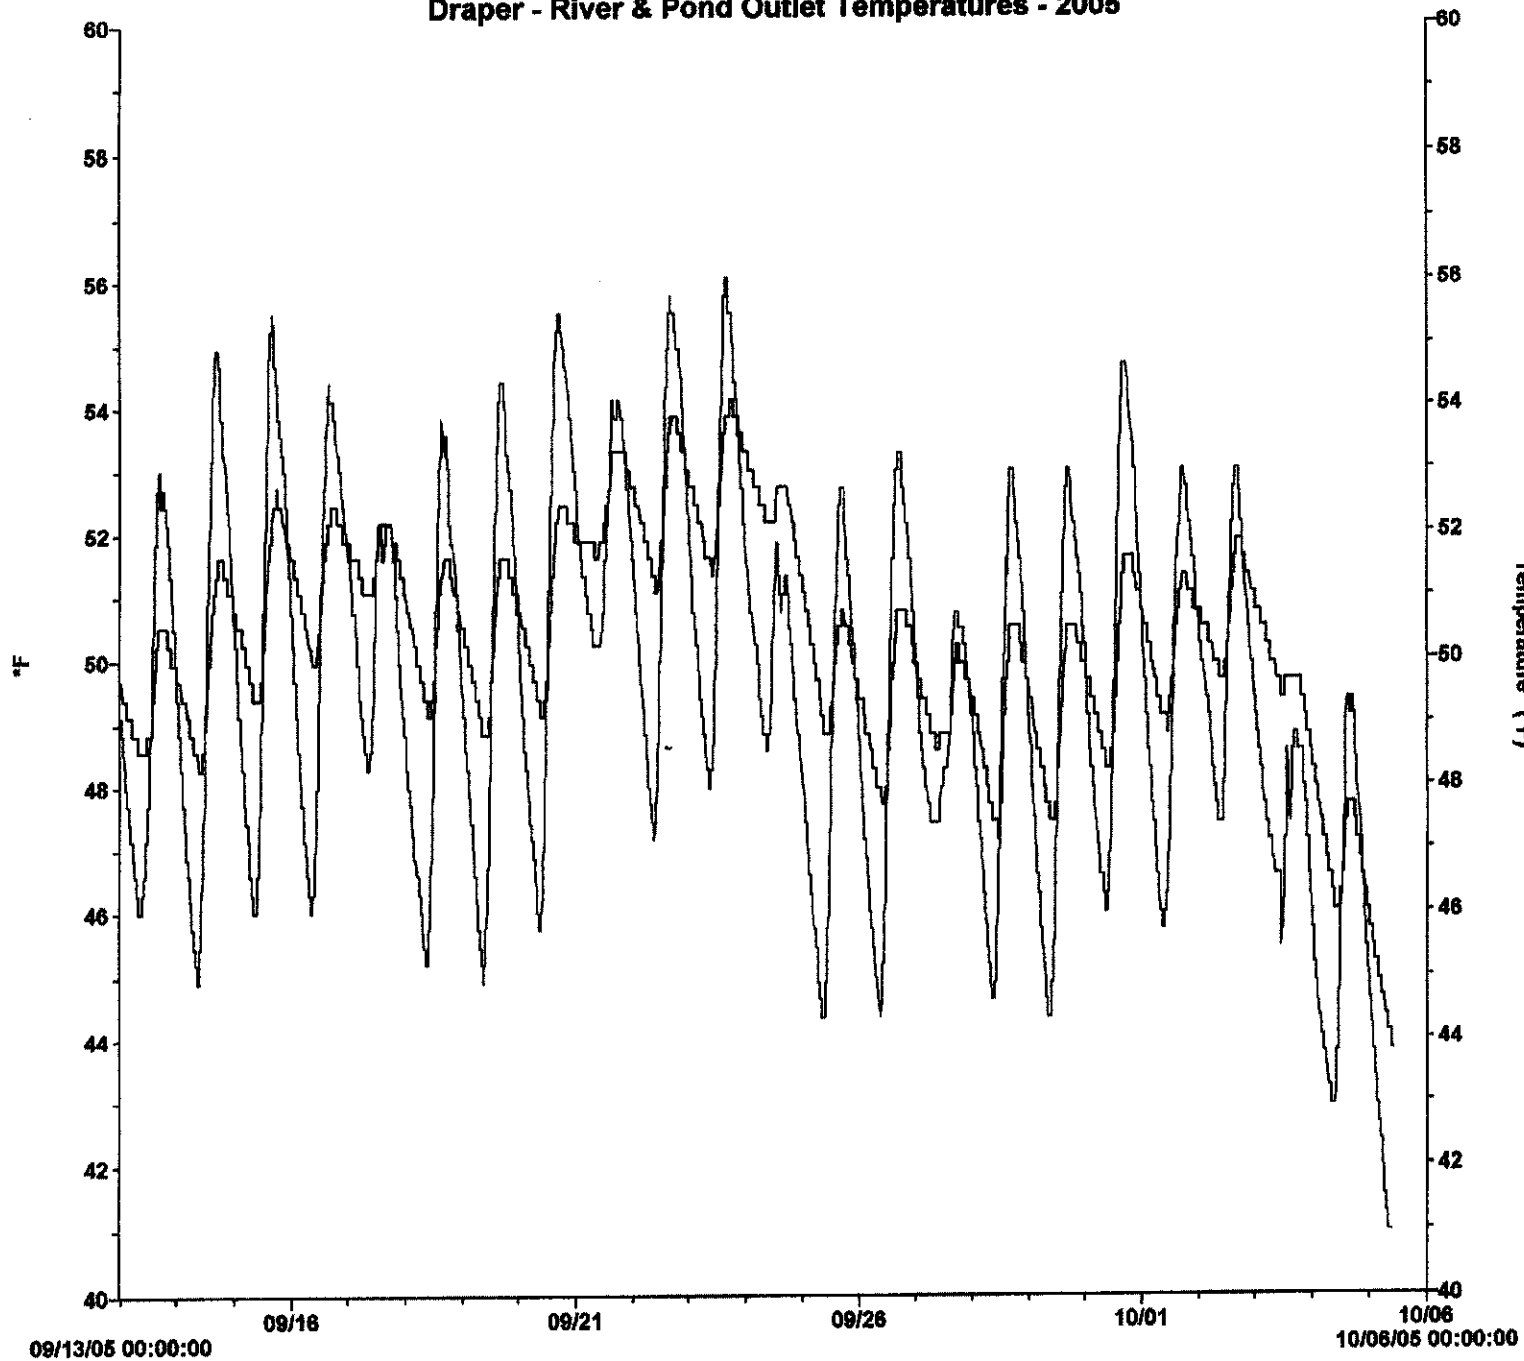

There have been no dissolved oxygen and pH testing. Steve Fischer will do testing in July. If dissolved oxygen is at a depressed state he will test again in one week. If not, he will test in 30 days.
