Keith:

What you outlined is fine with me. I will forward to Mr. Wilson and see if he can get agreement.

Mr. Villelli,

IDWR has had a chance to review the stipulated agreements that were forwarded to us regarding water right application 98-7859. The stipulations made reference that the Department of Water Resources would place a minimum stream flow on Round Prairie Creek which would have precedence over application 98-7859. IDWR does not have the authority to designate minimum stream flows, only the Idaho Water Resources Board has such authority. However, IDWR can place a condition on a permit issued to 98-7859, that would require the curtailment of any diversion when the flow in Round Prairie Creek dropped below an agreed upon cfs, measured at a designated location. On August 8, 2007 Greg Taylor and myself measured the flow in Round Prairie Creek, at the large culvert just downstream of your diversion point and recorded a flow of 1.4 cfs.

I think what you want is doable by conditioning the permit, rather than placing a minimum stream flow on the creek.

Let me know your thoughts.

Keith.

Keith:

Attached are copies of the stipulated agreement and of the letter to Tim Wilson, the attorney who is representing most of the people.

Please note from the letter that he has not secured all of the protestors agreement and my acceptance is subject to your agreement to the two (2)CFS.

I do not know if he will be able to secure everyone's agreement and if not perhaps this will have to continue to a hearing, but I am in hopes that cooler heads will prevail.

2/22/2008

Thanks for your help.

Sincerely,

Dick Villelli
