

MEMORANDUM

Date: February 12, 2008
To: Transfer 74530 File
From: Jeanie Robertson
Re: Evaluation of Sufficiency of Information Submitted

This transfer seeks to change the place of use and point of diversion on a portion of irrigation water right (36-16362) currently decreed for the diversion of 2.05 cfs and 582.4.0 AF to irrigate 152 acres. 36-16362 was split up front into three parts in order to process this and another transfer, 74533. This transfer deals with 36-16560 for 0.013 cfs, 3.8 AF, and 1 acre of irrigation. It is being moved to a 2-acre parcel recently split off by the applicants and will be limited to 1 acre within. It is being moved to an existing domestic well decreed under 36-10107. (The well for the unchanged portion of the right, 36-16559, may be in the wrong $\frac{1}{4}$ $\frac{1}{4}$ because it is described in NESENE of Section 19 but is linked to a WMIS point in the SESENE of Section 19, very close to the line, that was supposedly GPSd. They declined to include that right in the transfers however, so that well will be left as is.) No new wells will be drilled. There is no apparent hydrological impact so I recommend no advertising and approval of this transfer in the Region. Approximate location is $\frac{3}{4}$ miles south and 2 $\frac{3}{4}$ miles east of the center of Hagerman.

Authority to File:

IDWR Records show the parent right (36-16362) in the name of the applicants, Orval and Bonnie Vader. There is no lien holder on the property.

Water Right Validity:

A Partial Decree was issued for 36-7156 (original parent right) on 1/2/1998. Review of recent aerial photos appears to show the water right has been used.

Injury to Other Water Rights:

The area is located within the ESPA and water district 130 and will be under water master control subject to measuring and reporting requirements. The well is an existing well with no wells to be drilled. The place of use and points of diversion are all located completely within Cell 40, 14 of the model so no mitigation is required.

Enlargement of Use:

None anticipated.

Local Public Interest:

No negative impacts anticipated.

Beneficial Use/Conservation of Water Resources:

Proposed use is recognized as a beneficial use of water.

Review of the application finds there is no clear inconsistency with criteria set forth in Section 42-222 Idaho Code preventing processing of this application.
