Subject: Water right permit no. 45-07342

Per our discussion during the status conference yesterday we have checked on the status of this permit. Proof of beneficial use has been filed, but a field exam has not yet been done. The field exam is necessary for the right to go forward to license. I have called the regional manager at the Southern Region office to find out whether a field exam is scheduled, or how long it might take to get one scheduled and completed. He is not in today, so I will check back with him on Monday. I suspect that the earliest an exam could be done would be this summer, and it could well take longer considering the size of the backlog IDWR is presently facing. NBS
