Re: Expedited Approval Request-Additional Info
Application for Amendment of Permit No. 65-22882

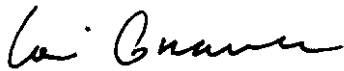

Dear Steve:

On behalf of North Lake Recreational Sewer & Water District (NLRSWD), I submitted an Application for Amendment of Permit 65-22882 in November of this year. The amendment proposed two additional points of diversion within NLRSWD's service area for a total of nine wells. We requested that the amendment be expedited and were denied due to lack of substantial information. We are asking that the request be reconsidered based on the following:

1. The current NLRSWD water system within this area contains two existing wells to supply water to existing customers. The existing water system does not have adequate supply capacity to provide water to new customers while meeting fire flow criteria and redundancy requirements for new and existing customers. The Settlers Mill Subdivision is currently under construction and is within the NLRSWD service area. In order for the NLRSWD to provide water to the Settlers Mill Subdivision and to achieve approval from the fire district and the Idaho Department of Environmental Quality, a new well must be constructed and added to the existing water supply system.
2. The two existing wells referenced above were drilled under permit 65-22882. As indicated on drilling permit no. 829746, construction for one of the two wells started February 15, 2005. Based on this information, it is credible to presume that a well would be drilled during the winter months if approved.
3. As indicated in the original request to expedite, NLRSWD has contractual agreements in place for the two new well sites proposed. Agreements for the other permitted proposed sites are currently being negotiated but have not been finalized.

Please let me know if you have any questions or need additional information.

Sincerely,

A handwritten signature in black ink, appearing to read "Lori Graves". The signature is fluid and cursive, with the first name "Lori" and last name "Graves" clearly distinguishable.
