A. Purpose of Transfer

1. ☐ Change point of diversion ☒ Add diversion point(s) ☐ Change place of use
☐ Change nature of use ☐ Change period of use ☐ Other _____
2. Describe the reason for the proposed changes. Properly designed wells are needed for the dairy. A new primary and backup dairy well is needed. One of the irrigation wells has failed and needs replacement. An additional irrigation well is needed to divert the authorized amount of water. An additional site is identified in the event that well interference reduces production.

A. Purpose of Transfer

- ☐ Change point of diversion ☒ Add diversion point(s) ☐ Change place of use
☐ Change nature of use ☐ Change period of use ☐ Other _____
- Describe the reason for the proposed changes The irrigation well converted to use at the dairy cannot supply both the dairy and irrigation at the same time; the high diversion rate moves a lot of sand. The sand is adverse to the dairy facility. A new irrigation well is needed. The second new well will supply the dairy. The well that pumps sand will remain as a backup system.

PART 1

6. General Information:

- a. Description of diversion system There are 3 existing wells, one of which pumps sand. The two good wells will remain for irrigation. One of the proposed wells will be for irrigation. It is the applicant's intent to reduce the demand on the well that pumps sand and use it as backup for the dairy. The second proposed well will become the primary dairy supply well.
- b. Are the lands from which you propose to transfer the water right subject to any liens, deeds of trust, mortgages, or contracts? ☐ Yes ☒ No. If yes, provide a notarized statement from the holder of the lien, deed of trust, mortgage or contract agreeing to the proposed changes.
- c. Describe the affect on the land now irrigated if the place of use is changed pursuant to this transfer: No Change
- d. Remarks: SEE ATTACHED

**Remarks
for Application for Transfer
Broken Arrow Farms Inc**

This Application for Transfer seeks to add two points of diversion (POD). Currently, one of the three authorized PODs serves both the dairy operation and irrigation. The other two authorized PODs serves irrigation demand. The well serving both irrigation and the dairy pumps sand at high diversion rates. This sand has adverse effects to the dairy. By adding a new irrigation well, the irrigation load can shift to the new well. A new dairy well will be constructed to reduce sand production. The existing well that pumps sand is intended to serve as backup. No changes will be made to the existing two irrigation wells.

This transfer application does not increase diversion rate or annual volume. No change is sought except to add two new wells.

This change in the POD does not affect nearby water users because the transfer does not change the demand on the aquifer.

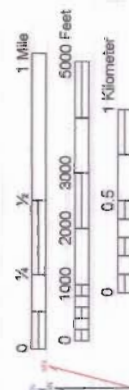

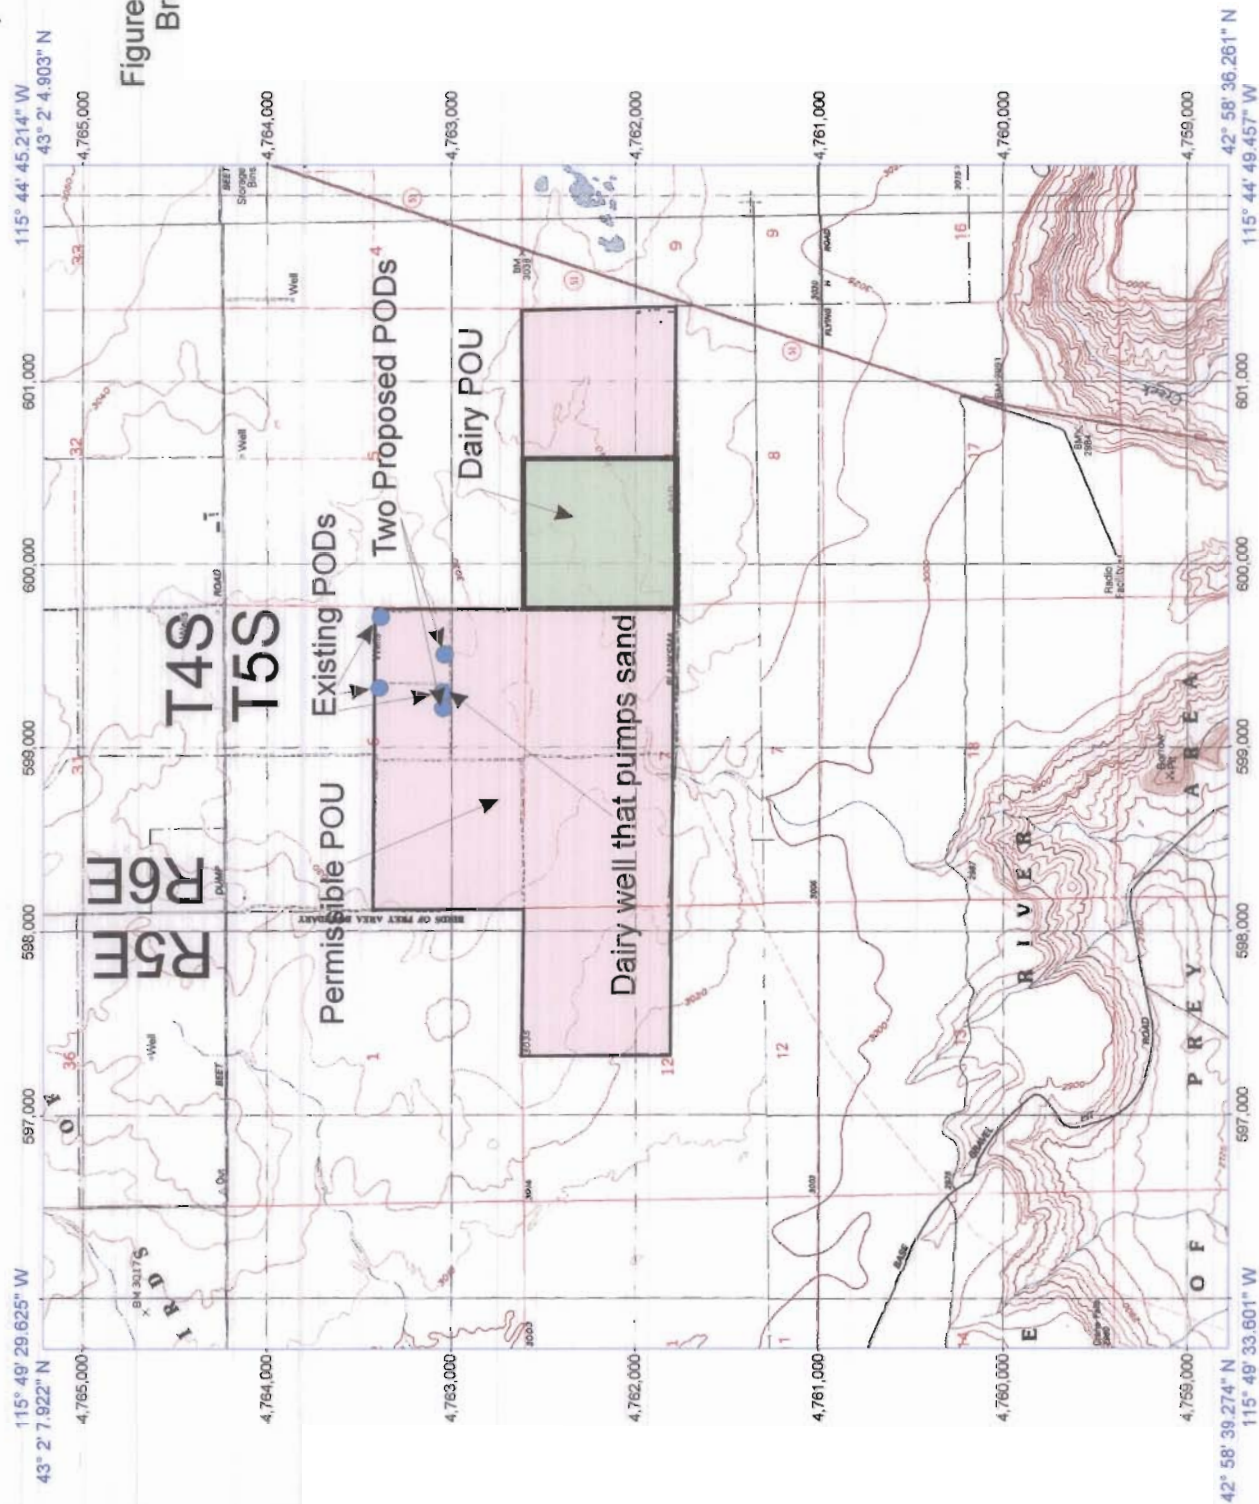

The closest neighboring well is approximately ½ mile north of the existing wells. The location of the proposed well is greater than ½ mile from the nearest neighboring well.

There will be no change the agricultural base to the area as a result of this transfer.

There will be no change in impact to the water resource, other than pumping less sand out of the aquifer.

A. Purpose of Transfer

1. ☐ Change point of diversion ☒ Add diversion point(s) ☐ Change place of use
☐ Change nature of use ☐ Change period of use ☐ Other _____
2. Describe the reason for the proposed changes The irrigation well converted to use at the dairy cannot supply both the dairy and irrigation at the same time; the high diversion rate moves a lot of sand. The sand is adverse to the dairy facility. A new irrigation well is needed to relieve the load. The same well will still supply the dairy, because it does not pump sand at the lower diversion rate used for the dairy only.

**Remarks
for Application for Transfer
Broken Arrow Farms Inc**

This Application for Transfer seeks to add a point of diversion (POD). Currently, one of the three authorized PODs serves both the dairy operation and irrigation. The other two authorized PODs serves irrigation demand and can provide backup to the dairy if needed. The well serving both irrigation and the dairy pumps sand at high diversion rates. This sand has adverse effects to the dairy. By adding a new well, the irrigation load can shift to the new well; the existing well will serve the dairy only. The dairy needs a lower diversion rate and the sand problem is greatly diminished. The two existing irrigation wells will continue to operate as they historically have; no changes will be made to the two irrigation wells.

This transfer application does not increase diversion rate or annual volume. No change is sought except to add a new well.

This change in the POD does not affect nearby water users because the transfer does not change the demand on the aquifer.

The closest neighboring well according to IDWR's interactive mapping database, is approximately ½ mile north of the existing well. The location of the proposed well is ¼ mile south and is therefore greater than ½ mile from the nearest neighboring well.

There will be no change the agricultural base to the area as a result of this transfer.

There will be no change in impact to the water resource, other than pumping less sand out of the aquifer.
