Re: Water Right No. 27-7577, License Processing

Evaluation of 27-7577 for license issuance, resulted in the following concerns:

Field Exam completed August 15, 2000 by Steve Mueller. Place of use analysis not completed during field exam but indicated that IDWR would receive aerial photographs of POU when available.

Field Exam reviewed by Nate Arave on April 25, 2007. Upon review, Nate produced a signed original Beneficial Use Field Report for the file in which the POU was identical to the Permit POU. A subsequent Beneficial Use Field Report in the file indicated a POU different from the Permit and a reduction in total area from 364 to 327.9 acres but did not decrease recommended flow or volume totals. This Beneficial Use Field Report was removed from the file since it was not signed or scanned and will change prior to issuing the license. Also in the file was an email from you to Nate indicating that the shape saved in SDE was 292 acres and that a map was not included with the field report.

I called Nate for clarification of the POU and also to request verification that the measuring device and lockable controlling works have been installed. Nate contacted the City of Blackfoot and confirmed the installation of the measuring device and lockable controlling works. Nate updated the POU shape to reflect 364 acres but also noted that land irrigated under this permit is not listed on the permit.

The current shape saved in SDE covers or overlaps houses, driveways, buildings, roads, and highways.

The current shape saved in SDE includes acreage not listed on the permit and will require a permit amendment prior to license issuance.
