Re: Field Visit

On Dec. 12th, Benny Walker and I visited the site of the spring development described by Application for Permit 43-13538. The spring was developed in 1987-88 for stock water use. The system consists of 4" sewer pipe, 1 1/4" poly pipe and several sets of troughs. The point of diversion and the pipeline is buried so verification of flow at this point was unobtainable. It appeared at the first set of troughs that the source will be more than adequate to provide the amount of water for the existing system. The attached photos documents our visit...
