Subject: FW: 37-21297 Draft Permit for New Arkoosh Hydro

Kevin,

Tim Luke and I would like you to comment on the attached draft permit for the new hydro plant Bill Arkoosh has proposed for the Little Wood River. We are specifically interested in condition no. 6, which would require a measuring device and data logger at the point of diversion. Bill would prefer to rate the turbine and supply KW data to you as he has done in the past for his other hydro plant. Tim recommended the measuring device because he recalls that there were some issues with other hydros in your district in the past, but he can't remember exactly what those issues were.

What is your opinion about the measuring device requirement? Would a permanent measuring device serve your needs better than the KW method? If so, how?

I would appreciate a written response for the application file. If you want to call Tim or me to talk about it first, that would be great.

Thanks for your help.
