Subject: Second City of Cambridge Transfer

Hello Dave,

I have received the second transfer for the City of Cambridge. To help jog your memory, the first transfer was on water right 67-2306 to add a new well and both the current wells on this water right. It was done in a hurry to ensure they could get the new well up and going and use this water right from their other well if needed for their summer peak period, while they fixed the original well for 67-2306. This second transfer was filed per your recommendation to put all three wells on their other two ground water rights - 67-7377 and 67-10970. The end goal is to have all three wells on all three water rights.

There are some minor details I am working out with Chris Duncan of Holladay Engineering on the transfer side of things, but the transfer should be ready to scan into A012 Backfile by the end of next week if needed.

The reason for this email is that I need to receive the Adjudication Opinion on how these rights will be recommended. Dave, you gave me the go ahead to transfer 67-2306, with the assumption it would be recommended as licensed. I think 67-7377 will be very similar to your suggestions on 67-2306. However, 67-10970 is a beneficial use claim, so it may be a little more difficult to determine what is needed. Since this is not in an active basin, I will be doing all of the foot work and will do any field work needed. It will be nice if I do get to go out into the field, I miss it, so please don't feel guilty about sending me out if needed. Basically, I will be your contractor for this file, so tell me what you need and I will get it done.

This transfer will not be as hurried as the first one, so let me know what you think when you get time to review the file.

Thank you,

Dan Nelson
