Subject: RE: Transfer 73710 - Woodland...

Jeanie,

There was an adjustment made when BLM couldn't allow the irrigation of the southern portion of the large pivot so I portioned that 4.8 acres back into the Woodland fraction so total irrigation would be covered regardless. The split to S&R didn't change. All volume and diversion rate splits should be proportional to acreage split as follows:

Originally : 4.49 cfs | 314 acres | 1256 afa
=====

Woodland:	3.65 cfs		255.3 acres		1021.2 afa
BLM	: 0.46 cfs		32 acres		128 afa
S&R	: 0.38 cfs		26.7 acres		106.8 afa

The BLM portion had to be reduced to 32 acres (even) since that was on their permit documentation. Any pages you have that do not reflect what I show above is from an early submittal that was revised/corrected and needs to be replaced.

Subject: Transfer 73710 - Woodland...

Hi Jason,
I was data-entering this transfer and I noticed a few discrepancies. I split two rights (36-16455 - originally from 36-2268A and 36-16457 - originally from 36-10090) up front for this and the BLM transfers. This transfer involves 36-16515 and 36-16517. I did the split according to your table, which turns out is a little different than the transfer application which you submitted 7/24/2006. Does the table reflect the irrigation agreement they all signed? The table shows the Woodlands getting 3.65 cfs from their portion of 36-2268A and 0.93 cfs from their portion of 36-10090, for a total of 3.65 cfs. The transfer application on page 1 shows 3.58 cfs? The volume is slightly different too. Then on page 2, 6C, it says the total irrigation will be limited to **250.5** acres within the 307 ac PPU. Should that be **255.3** acres within the 307 ac PPU, like the table? Let me know if we need to replace a page or two? Jeanie
